**Exploring Venus as a Terrestrial Planet** Larry W. Esposito, Ellen R. Stofan, Thomas E. Cravens, 2013-05-28 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 176 With the search for extra solar planets in full gear it has become essential to gain a more detailed understanding of the evolution of the other earth like planets in our own solar system Space missions to Venus including the Soviet Veneras Pioneer Venus and Magellan provided a wealth of information about this planet enigmatic surface and atmosphere but left many fundamental questions about its origin and evolution unanswered This book discusses how the study of Venus will aid our understanding of terrestrial and extra solar planet evolution with particular reference to surface and interior processes atmospheric circulation chemistry and aeronomy Incorporating results from the recent European Venus Express mission Exploring Venus as a Terrestrial Planet examines the open questions and relates them to Earth and other terrestrial planets The goal is to stimulate thinking about those broader issues as the new Venus data arrive

*Comparative Planetology with an Earth Perspective* Moustafa T. Chahine, Michael F. A'Hearn, Jürgen H. Rahe, 2013-04-17 The systematic study of the planets has experienced a slow but steady progress from the efforts of a single individual Galileo Galilei 1564 1642 to nations that individually and collectively create whole agencies and complex infrastructures devoted to the exploration and understanding of our solar system This quest for knowledge continues in earnest today as we attempt to understand Earth s unique place among its closest neighbors Known diversities emphasize fractionation processes that may have occurred in the nebula during early solar system formation and the vastly different evolutionary paths taken by the planets and their satellites The discovery of similarities and differences among the planets has given rise to a discipline of Comparative Planetology Here terrestrial properties and giant planet atmospheres are viewed and probed surface geologies are related to atmospheres and oceans interior structures are envisioned magnetic fields mapped and bizarre differences in satellites and ring systems continue to enlighten amaze and confound the detectives of planetary science A science organizing committee with international participation was formed to develop a conference program to address the basic issues and the fundamental processes that are common among the planets The goals of the meeting were twofold first the production of a reference source on comparative planetology for academia and second the provision of an impetus for NASA to begin a program devoted to this emerging science discipline The conference program accommodated seventeen invited papers and nineteen poster presentations
