## **Receptor Mediated Endocytosis:**

**Receptor-Mediated Endocytosis** P. Cuatrecasas, T.F. Roth, 2013-11-11 This volume focuses exclusively on those endocytic processes that sequester proteins by a selective receptor mediated mechanism In such an endocytic process cell surface receptors specifically bind protein ligands and localize them to specialized invaginations of the plasma membrane These regions are coated pits so named because they are lined on the cytoplasmic face with an ordered array of the protein clathrin It is this coat which provides their characteristic electron microscopic image Subsequently these regions pinch off to form coated vesicles which rapidly lose their coat and then fuse with other organelles or the plasma membrane The hallmarks of this process are the specific receptors coated pits coated vesicles and an ordered sequence of transit events leading to delivery to selected locations Receptor recognition specific disposition of the endocytosed ligand and the existence of receptor ligand complexes at highest density in coated pits define the process as selective and concentrative This topic has received ever increasing attention during the past few years The evolving mechanisms are especially exciting because they come at a time when the conventional views based on thermodynamic arguments suggest that proteins should not be able to cross into the cell Receptor mediated endocytosis however reconciles the view that biological membranes should be impervious to macromolecules with the evidence that certain macromolecules do gain entrance into the cell During the last few years this field has been stimulated by studies on the uptake and processing of low density lipoproteins LDL by cells

**Receptor/Ligand Sorting Along the Endocytic Pathway** Jennifer J. Linderman, Douglas A. Lauffenburger, 2013-03-08 This research monograph focuses on a biomolecular separation process that occurs within most cells Two types of molecules receptors and ligands are separated and routed along different intracellular pathways this is a critical step in the process of receptor mediated endocytosis The

development of an understanding of the basic mechanisms of this separation process is presented with an emphasis on discovering the fundamental and measurable parameters that influence the event Mathematical models of sorting are evaluated to predict the range of possible outcomes These are compared with a variety of experimental data on different receptor ligand systems In addition the influence of the separation on overall receptor ligand processing dynamics is discussed The book is intended for both biomathematicians and biologists It is not necessary to understand the details of the model equations and their solution in order to test the models experimentally The analysis suggests experiments that might be done to further investigate the sorting process and the text details methods for analyzing these experimental results

**Gold Nanoparticles in Biomedical Applications** Lev Dykman, Nikolai Khlebtsov, 2017-12-12 This book discusses fabrication of functionalized gold nanoparticles GNPs and multifunctional nanocomposites their optical properties and applications in biological studies This is the very first book of its kind to comprehensively discuss published data on in vitro and in vivo biodistribution toxicity and uptake of GNP by mammalian cells providing a systematization of data over the GNP types and parameters their surface functionalization animal and cell models As distinct from other related books Gold Nanoparticles in Biomedical Applications discusses the immunological properties of GNPs and summarizes their applications as an antigen carrier and adjuvant in immunization for the preparation of antibodies in vivo Although the potential of GNPs in nanobiotechnology has been recognized for the past decade new insights into the unique properties of multifunctional nanostructures have recently emerged With these developments in mind this book unites ground breaking experimental data

with a discussion of hybrid nanoparticle systems that combine different nanomaterials to create multifunctional structures. These novel hybrids constitute the material basis of theranostics bringing together the advanced properties of functionalized GNPs and composites into a single multifunctional nanostructure with simultaneous diagnostic and therapeutic functions. Such nanohybrids can be physically and chemically tailored for a particular organ disease and patient thus making personalized medicine available.

**Immunogenicity of Biopharmaceuticals** Marco Weert, Eva Horn Møller, 2008-02-06. A particular issue for biopharmaceuticals that has not been addressed comprehensively in any book is the potential of an immune response to the biopharmaceutical product. That is, the human body marks the drug as a foreign body and develops antibodies against the drug. These antibodies may be relatively harmless but may also cross react with the endogenous compound causing autoimmunogenicity. Recent adverse experiences in Europe with Janssen Ortho's blockbuster product Eprex has increased the attention towards potential immunogenicity of biopharmaceuticals, above all from the regulatory agencies. This book is intended to give a broad overview of the current state of the art regarding the immune response to biopharmaceuticals. The chapters range from an overview of the immune system and factors that may trigger the immune system via detection of antibodies and clinical implications to various case examples and the regulatory view on immunogenicity.

**Polymer-Drug Conjugates** Jitender Madan, Ashish Baldi, Monika Chaudhary, Neetu Chopra, 2023-07-05. *Polymer Drug Conjugates: Linker Chemistry, Protocols and Applications* discusses important concepts, fundamentals, and prospective applications of Linker Chemistry in a clear and concise manner. The book provides vital information on chemical entities binding with the drug-polymer complex for targeted drug delivery systems. It highlights roles and significance, different classes, and synthetic protocols, as well as mechanisms of chemical bond formation in drug-polymer conjugation in drug delivery, also offering insights into the mechanism of polymer interaction with linker and drug molecules by biodegradable chemical bonding. The protocol of binding with drug molecules is clearly explained and justified with case studies helping researchers and advanced students in the pharmaceutical sciences understand fundamentals involved and related aspects in molecule designing for effective therapeutic benefits. Covers mechanism, protocol, and therapeutic significance of Polymer Drug Conjugates. Outlines updated methods and techniques to enumerate conjugation with related case studies. Includes comprehensive compilation of marketed and clinical trial drugs conjugated with polymers or linkers.

Every year the Federation of European Biochemical Societies sponsors a series of Advanced Courses designed to acquaint postgraduate students and young postdoctoral fellows with theoretical and practical aspects of topics of current interest in biochemistry particularly within areas in which significant advances are being made This volume contains the Proceedings of FEBS Advanced Course No 88 02 held in Bari Italy on the topic Organelles of Eukaryotic Cells Molecular Structure and Interactions It was a deliberate decision of the organizers not to restrict FEBS Advanced Course 88 02 to a discussion of a single organelle or a single aspect but to cover a broad area One of the objectives of the course was to compare different organelles in order to allow the participants to discern recurrent themes which would illustrate that a basic unity exists in spite of the diversity A second objective of the course was to acquaint the participants with the latest experimental approaches being used by investigators to study different organelles this would illustrate that methodologies developed for studying the biogenesis of the structure function relationships in one organelle can often be applied fruitfully to investigate such aspects in other organelles A third objective was to impress upon the participants that a study of the interaction between different organelles is intrinsic to understanding their physiological functions This volume is divided into five sections Part I is entitled Structure and Organization of Intracellular Organelles
