Mudryk, Sebastian Werle, 2018-02-09 This volume presents refereed papers based on the oral and poster presentations at the 4th International Conference on Renewable Energy Sources which was held from June 20 to 23 2017 in Krynica Poland The scope of the conference included a wide range of topics in renewable energy technology with a major focus on biomass and solar energy but also extending to geothermal energy heat pumps fuel cells wind energy energy storage and the modeling and optimization of renewable energy systems The conference had the unique goal of gathering Polish and international researchers perspectives on renewable energy sources and furthermore of balancing them against governmental policy considerations Accordingly the conference offered not only scientific sessions but also panels to discuss best practices and solutions with local entrepreneurs and federal government bodies The Conference was jointly organized by the University of Agriculture in Krakow the International Commission of Agricultural and Biosystems Engineering CIGR the Polish Society of Agricultural Engineering AGH University of Science and Technology Krakow the Polish Society for Agrophysics under the patronage of the Rector of the University of Agriculture in Krakow and the Polish Chamber of Ecology **Ozone**

Connections Penelope Canan, Nancy Reichman, 2017-09-08 It is difficult to think of a more significant example of international cooperation to address a problem that threatened the health and wellbeing of the entire planet than the 1987 Montreal Protocol for the Elimination of Ozone Depleting Substances This breakthrough in international environmental governance has proved to be an extraordinary success beyond rhetoric or promises In a dozen years this international

agreement went from an understanding of the need to act in a precautionary manner for mutual benefit to a successful worldwide effort to eliminate chemical substances harmful to our protective ozone layer The production and consumption of most ozone depleting substances has now been phased out in developed countries with developing countries not far behind What happened and why is of tremendous importance for those looking for guidance in the future particularly those now involved in hugely complicated negotiations on climate change The success of the Montreal Protocol has been linked to many factors such as political will treaty flexibility and the recognition of equity issues raised by developing countries While comprehensively analysing all of these success factors Ozone Connections goes on to suggest that a social organization of global governance as typified by the protocol s Technical and Economic Assessment Panel TEAP was a unique but replicable decisive factor The book argues that we need to understand how the implementation of complex global environmental agreements depends on the construction and exploitation of social connections among experts who act collectively to define solutions to environmental problems This highly original and provoking thesis synthesises some of the more exciting social science concepts and methods while refining our basic understanding of environmental social change and providing policy makers with concrete success factors to replicate This book will be essential reading for academics in the fields of sociology political science international relations network studies human communication motivation collaboration and leadership as well as the burgeoning interdisciplinary field of environmental studies Businesses will also find many applications for practical use Finally the many directly transferable lessons from ozone layer protection make this book a key addition to the growing literature on climate change

Engineered Transparency 2021 Bernhard Weller,Jens Schneider,2021-07-06 This book contains more than 70 articles and presents international trends in structural glazing and facade construction Renowned authors from all over the world report on current research results and innovative construction projects
