Differential Identities in Rings and Algebras and their Applications Shakir Ali, Mohammad Ashraf, Vincenzo De Filippis, Lahcen Oukhtite, Nadeem Ur Rehman, 2025-05-26 The theory of differential identities in associative rings and algebras is the basis of this monograph Informally an identical relation involving arbitrary elements in the underlying rings or algebras along with the unknown differential function is called a differential identity in a ring or algebra Invariant theory non commutative geometry mathematical physics and the theory of rings and algebras are just a few of the fields where this abstract theory has proved to be an effective instrument for solving a wide range of challenging issues and as the twenty first century has arrived the theory of differential identities has found enormous applications in resolving a number of unresolved problems in the theory of rings This volume summarizes the findings and approaches that have significantly advanced the field during the previous three decades The first chapter provides a brief introduction to the topic The following three chapters cover the various kinds of derivations in rings and algebras as well as the interactions between the structure of some classes of rings with involution and the behavior of the underlying derivations generalized derivations skew derivations and b generalized derivations as well as their corresponding properties Chapter 5 explores the characterization of several kinds of higher derivable mappings and the structure of Lie and Jordan type higher derivations Although the book contains numerous applications of the conclusions presented in these chapters the last chapter mostly focuses on the application of derivations This research monograph is useful for researchers working in the area of differential identities in rings and algebras It provides a comprehensive and authoritative account of research findings **Polynomial Identities in Ring Theory**, 1980-07-24 **Polynomial Identities in Ring Theory** **The Book of Involutions** Max-Albert Knus, 1998-06-30 This monograph is an exposition of the theory of central simple algebras with involution in relation to linear algebraic groups It provides the algebra theoretic foundations for much of the recent work on linear algebraic groups over arbitrary fields Involutions are viewed as twisted forms of hermitian quadrics leading to new developments on the model of the algebraic theory of quadratic forms In addition to classical groups phenomena related to triality are also discussed as well as groups of type F_4 or G_2 arising from exceptional Jordan or composition algebras Several results and notions appear here for the first time notably the discriminant algebra of an algebra with unitary involution and the algebra theoretic counterpart to linear groups of type D_4 This volume also contains a Bibliography and Index Features original material not in print elsewhere a comprehensive discussion of algebra theoretic and group theoretic aspects extensive notes that give historical perspective and a survey on the literature rational methods that allow possible generalization to more general base rings *Rings with*
