Recursion and Human Language Harry van der Hulst, 2010-03-26 The present volume is an edited collection of original contributions which all deal with the issue of recursion in human language. All contributions originate as papers that were presented at a conference on the topic of recursion in human language organized by Dan Everett in March 22 2007. For the purpose of this collection all articles underwent a double blind peer review process. The present chapters were written in the course of 2008. Although the recursive nature of linguistic expressions i.e. the apparent possibility of producing an infinite number of expressions with finite means has been noted for a long time no general agreement seems to exist concerning the empirical status as well as mathematical formalization of this characteristic of human languages or of the grammars that lie behind these utterances that make up these languages. Renewed interest in this subject was sparked by recent claims that recursion is perhaps the sole uniquely human and as such universal trait of human language cf. Chomsky, Hauser and Fitch 2000. In this volume the issue of recursion is tackled from a variety of angles. Some articles cover formal issues regarding the proper characterization or definition of recursion while others focus on empirical issues by examining the kinds of structure in languages that suggest recursive mechanism in the grammar. Most articles discuss syntactic phenomena but several involve morphology, the lexicon and phonology. In addition we find discussions that involve evolutionary notions and language disorders and the broader cognitive context of recursion.
