Seti Science:

Searching for Extraterrestrial Intelligence H. Paul Shuch, 2011-02-14 This book is a collection of essays written by the very scientists and engineers who have led and continue to lead the scientific quest known as SETI the search for extraterrestrial intelligence Divided into three parts the first section The Spirit of SETI Past written by the surviving pioneers of this then emerging discipline reviews the major projects undertaken during the first 50 years of SETI science and the results of that research In the second section The Spirit of SETI Present the present day science and technology is discussed in detail providing the technical background to contemporary SETI instruments experiments and analytical techniques including the processing of the received signals to extract potential alien communications In the third and final section The Spirit of SETI Future the book looks ahead to the possible directions that SETI will take in the next 50 years addressing such important topics as interstellar message construction the risks and assumptions of interstellar communications when we might make contact what aliens might look like and what is likely to happen in the aftermath of such a contact Science, Religion, and Mormon Cosmology Erich Robert Paul, 1992 Merrill who urged a unique vision of reality that shaped a Mormon eschatology He shows how authorities eventually retreated from the perception of reality as true and adopted a scientifically less secure position in order to protect their theology an eventuality which ultimately resulted in a reactionary response to science within Mormonism **Exploring the Unknown: Space and Earth Science**, 1995 **Leadership in Science and Technology: A Reference Handbook** William Sims Bainbridge, 2011-10-20 This 2 volume set within the SAGE Reference Series on Leadership tackles issues relevant to leadership in the realm of science and technology To encompass the key topics in this arena this handbook features 100 topics arranged under eight headings Volume 1 concentrates on general principles of science and technology leadership and includes sections on social scientific perspectives on S key scientific concepts about leading and innovating in S characteristics of S and strategies tactics and tools of S leadership in government projects and research initiatives leadership in industry research development and innovation and finally leadership in education and university based research By focusing on key topics within 100 brief chapters this unprecedented reference resource offers students more detailed information and depth of discussion than typically found in an encyclopedia entry but not as much jargon detail or density as in a journal article or a research handbook chapter Entries are written in language and style that is broadly accessible and each is followed by cross references and a brief bibliography and further readings A detailed index and an online version of the work enhances accessibility for today s student audience *Scientific and Technical Aerospace Reports*, 1992 Science, Culture and the Search for Life on Other Worlds John W. Traphagan, 2016-08-26 This book explores humanity s thoughts and ideas about extraterrestrial life paying close attention to the ways science and culture interact with one another to create a context of imagination and discovery related to life on other worlds Despite the recent explosion in our knowledge of other planets and the seeming era of discovery in which we

live to date we have found no concrete evidence that we are not alone Our thinking about life on other worlds has been and remains the product of a combination of scientific investigation and human imagination shaped by cultural values particularly values of exploration and discovery connected to American society The rapid growth in our awareness of other worlds makes this a crucial moment to think about and assess the influence of cultural values on the scientific search for extraterrestrial life Here the author considers the junction of science and culture with a focus on two main themes 1 the underlying assumptions many of which are tacitly based upon cultural values common in American society that have shaped the ways researchers in astrobiology and SETI have conceptualized the nature of their endeavor and represented ideas about the potential influence contact might have on human civilization and 2 the empirical evidence we can access as a way of thinking about the social impact that contact with alien intelligence might have for humanity

The Science of Sci-Fi Cinema

Vincent Piturro, 2021-07-30 Science fiction films present hypothetical futures featuring imagined technological advancements not yet realized but perhaps more or less plausible Yet how much of what audiences see is within the bounds of possibility Can we really envision what a black hole looks like Can dinosaurs really be genetically re engineered Originating from an annual Science Fiction Film Series in Denver Colorado this volume of essays examines 10 films with a focus on discerning the possible the unlikely and the purely science fictional With essays by scientists in relevant fields chapters provide analyses of the movies themselves along with examination of the actual science or lack thereof in each film

Battleground: Science and Technology Peter H. Denton, Sal Restivo, 2008-10-30 The modern world is filled with debate and controversy and science and technology the most characteristic features of the modern world are not immune Science and technology are implicated in many if not all of the issues troubles and problems students are likely to come across in their classes and in their everyday lives Science and technology serve as a primary pathway to understanding front page headlines on everything from war to AIDS and from oil exploration to global warming *Battleground Science and Technology* examines the most hot button issues involving science and technology and provides a balanced assessment of the arguments on all sides of the often strident debates The approximately 100 issues examined in *Battleground Science and Technology* include topics in the brain sciences including the controversies over the cause of autism and the reliability of memory as well as the debates over parapsychology debates surrounding information technology such as only privacy the impact of video games on social behavior and the advent of virtual reality the complexity over drugs and medications such as the testing of the efficacy of medications the war on recreational drugs and the costs of pharmaceutical research and hot button topics that are constantly in the news such as evolution and creationism DNA testing stem cell research and genetically modified organisms Each entry provides a list of accessible resources useful for further research

Popular Science

, 1995-12 Popular Science gives our readers the information and tools to improve their technology and their world The core belief that Popular Science and our readers share The future is going to be better and science and technology are the driving forces that will help make it better

Extraterrestrials E. Regis, 1987-04-24 With current interest in extraterrestrials at a peak this book is a collection of original and reprinted articles advancing the latest scientific ideas as to the possible existence and nature of extraterrestrial intelligent life Usually this subject is treated only in popular media such as science fiction novels movies and television Recently however scientists and researchers have begun to consider in earnest whether extraterrestrials really exist whether they have evolved from simpler forms of life whether they have evolved intelligence and if so whether their modes of understanding the world are comparable to and congruent with our own The contributors to this volume cover these topics and also consider how we might communicate with aliens and whether we would be able to understand the alien messages we might receive Finally the authors who include distinguished scientists speculate whether the aliens might have a moral code and what might be our moral obligations in the event any extraterrestrials were ever discovered
