Supermicrosurgical Lymphaticovenular Anastomosis Giuseppe Visconti, Akitatsu Hayashi, Johnson Chia-Shen

Yang,2024-11-11 The supermicrosurgical procedure known as Lymphaticovenular Anastomosis or LVA is a minimally invasive physiologic surgical treatment of lymphedema which has gained attention worldwide in recent years as technical limitations were overcome and surgical indications can now apply to a larger set of patients with lymphatic disease. Complex advanced stage lymphedema cases and patients with lymphorrhea still have functional lymphatic channels and could benefit from lymphaticovenular anastomosis. The latest technologies such as ultrahigh frequency ultrasound allow now to perform a detailed preoperative planning improving efficacy and reliability of the intervention. Additional technologies that are available as for example Rest Stress Lymphoscintigraphy Laser Tomography and Photoacoustic Imaging are also presented in the book as all concur to build a complete preoperative and intraoperative set of information. Supermicrosurgical Lymphaticovenular Anastomosis is a handy one of a kind guide built on the experience of contributors that are experts in this highly specialized field while presenting topics in a clear and complete fashion with the support of over 240 illustrations and chapter related videos for a thorough understanding of preparatory steps and microsurgical techniques. This volume will be a valued companion to the modern microsurgeon dealing with lymphedema who wants to refine supermicrosurgical skills but also be of interest for professionals to gain insight in latest and more traditional technologies through the related dedicated chapters and videos.
