**New Directions** Rolf Färe, Shawna Grosskopf, 2006-03-30 The format of this monograph is three essays which we arrived at after spending a year writing over one hundred pages of what we eventually realized was a tedious reworking of old material So we started over determined to write something new At first we thought this approach might not work as a coherent monograph which is why we chose the essay format rather than chapters As it turns out there is a common thread namely the directional distance function which also gave us our title As you shall see the directional distance function includes traditional distance functions and efficiency measures as special cases providing a unifying framework for existing productivity and efficiency measures It is also flexible enough to open up new areas in productivity and efficiency analysis such as environmental and aggregation issues That we did not see this earlier is humbling a student at a recent conference raised his hand and asked Why didn't you start with the directional distance function in the first place In deed This manuscript is intended to make up for our earlier oversights This monograph contains papers coauthored with Wen Fu Lee and Osman Zaim and one paper written by two former students Hiroyuki Fukuyama and Bill Weber We thank them for their contributions An other former student Jim Logan Logi read and critiqued the manuscript for which we are grateful **New**

Hilton,G.S. Young,2012-12-06 It is close enough to the end of the century to make a guess as to what the Encyclopedia Britannica article on the history of mathematics will report in 2582 We have said that the dominating theme of the Nineteenth Century was the development and application of the theory of functions of one variable At the beginning of the Twentieth Century mathematicians turned optimistically to the study off unctions of several variables But wholly unexpected difficulties were met new phenomena were discovered and new fields of mathematics sprung up to study and master them As a result except where development of methods from earlier centuries continued there was a recoil from applications Most of the best mathematicians of the first two thirds of the century devoted their efforts entirely to pure mathe matics In the last third however the powerful methods devised by then for higher dimensional problems were turned onto applications and the tools of applied mathematics were drastically changed By the end of the century the temporary overemphasis on pure mathematics was completely gone and the traditional interconnections between pure mathematics and applications restored This century also saw the first primitive beginnings of the electronic calculator whose development in the next century led to our modern methods of handling mathematics **New Directions in Soviet Literature** Sheelagh Duffin Graham,1992-12-13 This is a selection of papers on Russian literature of the Soviet period presented at the IVth World Congress for Soviet and East European Studies in 1990 The ten articles range from the experimental prose and drama of the 1920s to studies of work by younger writers of the 1980s The articles include analyses of works by individual writers and examinations of general phenomena for example village prose or the way Stalin is presented in literature of the glasnost era **New Directions in Logic, Language, and Computation** Daniel Lassiter,Marija Slavkovik,2012-07-26 The European Summer School in Logic Language and Information ESSLLI is organized every year by the Association for Logic Language and Information FoLLI in different sites around Europe The main focus of ESSLLI is on the interface between linguistics logic and computation ESSLLI offers foundational introductory and advanced courses as well as workshops covering a wide variety of topics within the three areas of interest Language and Computation Language and Logic and Logic and Computation During two weeks around 50 courses and 10 workshops are offered to the attendants each of 1 5 hours per day during a five days week with up to seven parallel sessions ESSLLI also includes a student session papers and posters by students only 1 5 hour per day during the two weeks and four evening lectures by senior scientists in the covered areas The 15 revised full papers presented were

Payne,2014-07-11 In 1938 Prime Minister Neville Chamberlain hoped that a policy of appeasement would satisfy Adolf Hitler s territorial appetite and structured British policy accordingly This plan was a failure chiefly because Hitler was not a statesman who would ultimately conform to familiar norms Chamberlain s policy was doomed because he had greatly misjudged Hitler s basic beliefs and thus his behavior U S Cold War nuclear deterrence policy was similarly based on the confident but questionable assumption that Soviet leaders would be rational by Washington s standards they would behave reasonably when presented with nuclear threats The United States assumed that any sane challenger would be deterred from severe provocations because not to do so would be foolish Keith B Payne addresses the question of whether this line of reasoning is adequate for the post Cold War period By analyzing past situations and a plausible future scenario a U S Chinese crisis over Taiwan he proposes that American policymakers move away from the assumption that all our opponents are comfortably predictable by the standards of our own culture In order to avoid unexpected and possibly disastrous failures of deterrence he argues we should closely examine particular opponents culture and beliefs in order to better anticipate their likely responses to U S deterrence threats
