New Drug Treatments For Diabetes:

The Diabetes Self-Management Handbook Dr Netra Khadka, 2024-03-29 A silent killer is diabetes unknown to many of us who live with it. Therefore we do not take this disease seriously. Only when diabetes complications persist we become concerned and worried. Often in times of panic we turn to glamorous products and services that promise quick fixes. Many times even after investing a lot of money and time no results are achieved. The truth is that if we want to help ourselves we can certainly do so without anyone's assurances or false promises in managing diabetes. Based on this premise the author in this book uses his academic and research background, the latest information and his real life experience to provide knowledge and understanding that will help us effectively manage diabetes. We may find managing diabetes on our own to be a daunting task but the author gives us useful tips we may not have heard before that can help transform our lives into a happier, healthier and more fulfilling one. We can also benefit from this book if we have not yet fallen into the diabetes trap but are at risk for it due to our overweight.

Traditional Medicines for Modern Drug Therapy for the Elderly Martin Wehling, 2012-08-17 With people aged 65 years and older currently making up the fastest growing age group throughout the world, the demographic revolution of an aging society will inevitably lead to increased pressure to develop a rationalistic and age tailored process of diagnosis and treatment among the elderly. As aging people often suffer from several chronic diseases and are being treated with multiple medications, concurrently unwanted drug interactions occur more frequently. Whereas recent approaches have recommended to remove particular drugs from the medication regimen to avoid adverse effects, *Drug Therapy for the Elderly* underlines both indispensable and dispensable elements of drug treatment in order to provide an overall assessment of drugs suitable for the aged. In view of the multimorbidity and polypharmacy situations experienced by elderly patients, this book takes into account the special needs and requirements shown by this group, thus serving as a timely reference for physicians who treat the elderly.
