Such a process involves reading a context from different perspectives, constructing new meanings, framing the complexities and dilemmas faced into new landscapes of possible future actions, and creating a persuasive argument for those landscapes amongst those who must work in them. For such a process to be conducted successfully, a range of abilities and skills become relevant, such as storytelling, metaphors, and developing arguments. *Management and Language* is a timely publication with contributions from eminent academics in the field. User Integration in Sustainable Product Development Esther Hoffmann, 2017-09-08. Changes in production and consumption patterns are a crucial element in advancing the sustainability agenda. Many companies are now contributing to such efforts through a focus on sustainable innovation when developing new products and services. However, problematically, many such products fail as consumers reject them in the marketplace. User integration in product development is a well-suited approach to increase the usability and the marketability of new products. This book asks the following question: under what conditions can companies trigger sustainability-oriented organizational learning processes by integrating consumers in product development? The author analyses this question by studying a new approach called INNOCOPE: Innovating through consumer integrated product development. The analysis is based on a process model of organizational learning, distinguishing different learning phases and related boundary spanning activities. The case study shows that boundary spanning and communication with external actors may directly affect almost all phases of the organizational learning process. Depending on the organizational learning phase, specific boundary spanning activities are identified that can be characterized as outside-in, inside-in, or inside-out directed processes. Moreover, the book describes supportive conditions for user integration with regard to the company, the product, the users involved, and the communication process, and provides managerial recommendations. *User Integration in Sustainable Product Development* sheds new light on the interaction between companies and users in innovation processes and how they relate to sustainable product development. Its focus on organizational learning at and across the boundaries of companies is original, stimulating, and improves our understanding of user-producer interactions, distinguishing the book from other publications on the market. The book provides a hugely comprehensive overview of user integration in innovation processes, its advantages, problems, and weaknesses, and the methods in which it is currently applied. This, along with a systematic analysis of organisational learning, provides the reader with a complete understanding of what has to be considered when studying user-producer interactions from a company perspective and provides the basis for further improvements and company strategies to advance the take-up of sustainable products. The book will be essential reading for academics and practitioners involved with organizational learning innovation.
