

GEOG 101 People and their Environment Chapter 1 Review Questions:

1. what two ways and for what different purposes do geographers refer to location? When geographers say "location matters," what aspect of location commands their interest?

Relative location refers to the placement of a particular place concerning other geographic features or locations, such as its distance from other cities, bodies of water or mountain ranges. This helps to comprehend the spatial relationships between different places and how they interact with one another. Geographers use relative location to study how a place's location affects its economic, social, and environmental conditions. For example, a city's proximity to a significant port can have an impact on its trade and industry, while its location in a region prone to natural disasters can affect its susceptibility to hazards. Understanding the relative location of a place can provide insights into its development and assist in making decisions about resource allocation and policy. It is crucial to consider relative location while analyzing the significance of a place's location.

2. What does the term cultural landscape imply? How is the cultural landscape related to the physical environment?

Cultural landscapes are closely linked to the physical environment, as they are both influenced by and interact with natural processes and features. Distinct land use and settlement patterns can result from the agricultural practices of a culture, which are influenced by the soil, climate, and topography of a region. Additionally, human activity can modify the physical environment to reflect cultural practices, such as the creation of terraced fields on steep slopes or ornamental gardens. The relationship between cultural landscape and the physical environment is intricate and ever-changing, as cultural practices can shape the physical environment, and the physical environment can also influence cultural practices. Reflections of cultural values and beliefs are often evident in the way humans interact with the natural environment, and cultural landscapes can provide valuable insights into the ways that societies have adapted to and transformed their environments over time.

Egenhofer,Robin Fegeas,Cliff Kottman,2012-12-06 Geographic information systems have developed rapidly in the past decade and are now a major class of software with applications that include infrastructure maintenance resource management agriculture Earth science and planning But a lack of standards has led to a general inability for one GIS to interoperate with another It is difficult for one GIS to share data with another or for people trained on one system to adapt easily to the commands and user interface of another Failure to interoperate is a problem at many levels ranging from the purely technical to the semantic and the institutional Interoperating Geographic Information Systems is about efforts to improve the ability of GISs to interoperate and has been assembled through a collaboration between academic researchers and the software vendor community under the auspices of the US National Center for Geographic Information and Analysis

and the Open GIS Consortium Inc It includes chapters on the basic principles and the various conceptual frameworks that the research community has developed to think about the problem Other chapters review a wide range of applications and the experiences of the authors in trying to achieve interoperability at a practical level Interoperability opens enormous potential for new ways of using GIS and new mechanisms for exchanging data and these are covered in chapters on information marketplaces with special reference to geographic information Institutional arrangements are also likely to be profoundly affected by the trend towards interoperable systems and nowhere is the impact of interoperability more likely to cause fundamental change than in education as educators address the needs of a new generation of GIS users with access to a new generation of tools The book concludes with a series of chapters on education and institutional change Interoperating Geographic Information Systems is suitable as a secondary text for graduate level courses in computer science geography spatial databases and interoperability and as a reference for researchers and practitioners in industry commerce and government *Advanced Physical Education Through Diagrams* David Morton, 2000 Each page in this A level revision guide is a self contained summary using mainly diagrams with clear explanations to make revision easier and to facilitate retention of the relevant material for examination purposes The British Catalogue of Books Published from October 1837 to December 1852 ,1853
