New Knowledge in the Biomedical Sciences W.B. Bondeson,H. Tristram Engelhardt Jr.,S.F. Spicker,J.M. White,1982-01-31 The spectacular development of medical knowledge

over the last two centuries has brought intrusive advances in the capabilities of medical technology. These advances have been remarkable over the last century but especially over the last few decades culminating in such high technology interventions as heart transplants and renal dialysis. These increases in medical powers have attracted societal interest in acquiring more such knowledge. They have also spawned concerns regarding the use of human subjects in research and regarding the byproducts of basic research as in the recent recombinant DNA debate. As a consequence of the development of new biomedical knowledge physicians and biomedical scientists have been placed in positions of new power and responsibility. The emergence of this group of powerful and knowledgeable experts has occasioned debates regarding the accountability of physicians and biomedical scientists. But beyond that the very investment of resources in the acquisition of new knowledge has been questioned. Societies must decide whether finite resources would not be better invested at this juncture or in general in the alleviation of the problems of hunger or in raising general health standards through interventions which are less dependent on the intensive use of high technology. To put issues in this fashion touches on philosophical notions concerning the claims of distributive justice and the ownership of biomedical knowledge.

Public Health Service Publication , The Growth of Medical Knowledge H.A. Ten Have, G.L. Kimsma, S.F. Spicker, 2012-12-06

The growth of knowledge and its effects on the practice of medicine have been issues of philosophical and ethical interest for several decades and will remain so for many years to come. The outline of the present volume was conceived nearly three years ago. In 1987 a conference on this theme was held in Maastricht the Netherlands on the occasion of the founding of the European Society for Philosophy of Medicine and Health Care (ESPMH). Most of the chapters of this book are derived from papers presented at that meeting and for the purpose of editing the book Stuart Spicker Ph.D. joined two founding members of ESPMH, Henk ten Have and Gerrit Kimsma. The three of them successfully brought together a number of interesting contributions to the theme and ESPMH is grateful and proud to have initiated the production of this volume. The Society intends that annual meetings be held in different European countries on a rotating basis and to publish volumes related to these meetings whenever feasible. In 1988 the second conference was held in Aarhus, Denmark on Values in Medical Decision Making and Resource Allocation in Health Care. In 1989 a meeting was held in Czestochowa, Poland on European Traditions in Philosophy of Medicine. From Brentano to Bieganski. It is hoped that these conferences and the books to be derived from them will initiate a new European tradition lasting well into the 21st century. P.J.
