Cimino, 2012-12-06 The 1977 lectures of the International School for the History of Science at Erice in Sicily were devoted to that vexing but inexorable problem the nature of scientific discovery With all that has been written by scientists themselves by historians and philosophers and social theorists by psychologists and psychiatrists by logicians and novelists the problem remains elusive Happily we are able to bring the penetrating lectures from Erice that summer to a wider audience in this volume of theoretical investigations and detailed case studies The ancient and lovely town of Erice in Northwest Sicily 750 m above the sea was famous throughout the Mediterranean for its temple of the goddess of nature Venus Erycina said to have been built by Daedalus As philosophers and historians of the natural sciences we hope that the stimulating atmosphere of Erice will to some extent be transmitted by these pages We are especially grateful to that generous and humane physician and historian of science Dr Vincenzo Cappelletti himself a creative scientist for his collaboration in bringing this work to completion We admire his intelligent devotion to fostering creative interaction between scientists and historians of science as Director of the School of History of Science within the great Ettore Majorana Centre for Scientific Culture at Erice as well as for his imaginative leadership of the Istituto della Enciclopedia Italiana The Science of Our World: A Journey Through

Supreme Court,1901 **Mining Engineers' Handbook** Robert Peele,1927 **Humanism and Protestantism in Early Modern English Education** Ian Green,2016-05-13 This volume is the first attempt to assess the impact of both humanism and Protestantism on the education offered to a wide range of adolescents in the hundreds of grammar schools operating in England between the Reformation and the Enlightenment By placing that education in the context of Lutheran Calvinist and Jesuit education abroad it offers an overview of the uses to which Latin and Greek were put in English schools and identifies the strategies devised by clergy and laity in England for coping with the tensions between classical studies and Protestant doctrine It also offers a reassessment of the role of the godly in English education and demonstrates the many ways in which a classical education came to be combined with close support for the English Crown and established church One of the major sources used is the school textbooks which were incorporated into the English Stock set up by leading members of the Stationers Company of London and reproduced in hundreds of thousands of copies during the seventeenth and eighteenth centuries Although the core of classical education remained essentially the same for two centuries there was a growing gulf between the methods by which classics were taught in elite institutions such as Winchester and Westminster and in the many town and country grammar schools in which translations or bilingual versions of many classical texts were given to weaker students The success of these new translations probably encouraged editors and publishers to offer those adults who had received little or no classical education new versions of works by Aesop Cicero Ovid Virgil Seneca and Caesar This fascination with ancient Greece and Rome left its mark not only on the lifestyle and literary tastes of the educated elite but also reinforced the strongly moralistic outlook of many of the English laity who equated virtue and good works with pleasing God and meriting salvation

A History of the World in 12 Maps Jerry Brotton,2013-11-14 A New York Times Bestseller Maps allow the armchair traveler to roam the world the diplomat to argue his points the ruler to administer his country the warrior to plan his campaigns and the propagandist to boost his cause rich and beautiful Wall Street Journal Throughout history maps have been fundamental in shaping our view of the world and our place in it But far from being purely scientific objects maps of the world are unavoidably ideological and subjective intimately bound up with the systems of power and authority of particular times and places Mapmakers do not simply represent the world they construct it out of the ideas of their age In this scintillating book Jerry Brotton examines the significance of 12 maps from the almost mystical representations of ancient history to the satellite derived imagery of today He vividly recreates the environments and circumstances in which each of the maps was made showing how each conveys a highly individual view of the world Brotton shows how each of his maps both influenced and reflected contemporary events and how by considering it

in all its nuances and omissions we can better understand the world that produced it Although the way we map our surroundings is more precise than ever before Brotton argues that maps today are no more definitive or objective than they have ever been Readers of this beautifully illustrated and masterfully argued book will never look at a map in quite the same way again A fascinating and panoramic new history of the cartographer s art The Guardian The intellectual background to these images is conveyed with beguiling erudition There is nothing more subversive than a map The Spectator A mesmerizing and beautifully illustrated book The Telegraph **The Law Library** ,1855
