**Waistland: A (R)evolutionary View of Our Weight and Fitness Crisis** Deirdre Barrett,2007-06-17 Harvard psychologist Deirdre Barrett tackles the obesity and fitness crisis from an evolutionary standpoint In the modern jungle of burgers couches and remote controls obesity is an enormous and growing epidemic Weight loss books and diet gurus urge us to listen to our bodies but our instincts are designed for the African savannah not food courts The sugary and fatty foods that we as hunter gatherers are programmed to forage used to be hard to come by Now they re as close as the vending machine down the hall Radical changes are necessary and fortunately are biologically easier than small or gradual changes in diet Barrett tells us how to reprogram our bodies break food addictions and ignore our attraction to supernormal stimuli artificial creations that appeal to our instincts more than the natural objects they mimic Barrett delves into scientific research from animal ethology to evolution to show the disastrous direction in which our instincts have led us and how using our intellect we can get back on course

**Hearers and Doers** Kevin J. Vanhoozer,2019-05-15 The foundation of discipleship is sound scriptural doctrine The value of sound doctrine is often misunderstood by the modern church While it can be dry and dull when it flows from the story of Scripture it can be full of life and love This kind of doctrine steeped in Scripture is critical for disciple making And it s often overlooked by modern pastors In Hearers and Doers Kevin Vanhoozer makes the case that pastors as pastor theologians ought to interpret Scripture theologically to articulate doctrine and help cultivate disciples scriptural doctrine is vital to the life of the church and local pastor theologians should be the ones delivering it to their communities With arresting prose and striking metaphors Vanhoozer addresses the most pressing problems in the modern church with one answer teach sound scriptural doctrine to make disciples

**Supernormal Stimuli: How Primal Urges Overran Their Evolutionary Purpose** Deirdre Barrett,2010-02-22 How our once helpful instincts got hijacked by our garish modern world Have you ever wondered why some men choose pornography over actual women Why so many people watch Friends instead of going out with their own buddies Why a person would feed a plastic Pocket Pet while shirking real duties Why both sides of every war see the other as the aggressor against whom their Department of Defense must respond Harvard evolutionary psychologist Deirdre Barrett explains how human instincts for food sex or territorial protection developed for life on the savannah ten thousand years ago not for today s world of densely populated cities technological innovations and pollution Evolution quite simply has been unable to keep pace with the rapid changes of modern life We now have access to a glut of larger than life objects from candy to pornography to atomic bombs that gratify

outmoded but persistent drives with dangerous results In the 1930s Dutch Nobel laureate Niko Tinbergen found that birds that lay small pale blue eggs speckled with gray preferred to sit on giant bright blue plaster dummies with black polka dots He coined the term supernormal stimuli to describe these imitations that appeal to primitive instincts and oddly exert a stronger attraction than real things Obviously these hard wired preferences pose a danger to a species survival Barrett's singular insight is to apply this phenomenon for the first time to the alarming disconnect between human instinct and our created environment Her book adroitly demonstrates how supernormal stimuli are a driving force in many of today's most pressing problems including obesity our addiction to television and video games and the past century's extraordinarily violent wars Man made imitations it turns out have wreaked havoc on how we nurture our children what food we put into our bodies how we make love and war and even how we understand ourselves Barrett does more than pull the fire alarm to show how these unfettered instincts fuel dangerous excesses There is a hopeful message here as well Once we recognize how supernormal stimuli operate we can craft new approaches to modern predicaments Humans have one stupendous advantage over Tinbergen's birds a giant brain The message of this book is that this gives us the unique ability to exercise self control override instincts that lead us astray and save ourselves from civilization's gaudy traps **Saving Tatas** Christine

Austin, 2016-09-12 Christin Austin is well aware of the fear and concern that women have regarding their breast health She herself received very bad news of a potential breast cancer diagnosis in 2005 shortly after her mother's diagnosis Her cousin Angela lost her battle with cancer at the age of 33 and her mother succumbed to the disease in 2010 After healing her own breasts Christine has vowed to help women to do the same Women need not wait to be broken to improve breast health With these proven strategies they can start healing their breasts today Saving Tatas is different because it is based on Christine's experience and proven strategies that significantly changed her risk assessment Her breast test results went from high probability of malignancy to no criteria that establish risk for malignant disease The reality is that Breast Cancer Awareness strategies have done little if nothing to decrease the incidence of diagnosis The mammogram can be a useful tool for detecting a breast tumor however the cancer cells may have already entered the lymphatic system producing a potential death sentence The aim of Saving Tatas is to arm women with useful information that can prevent and or reverse unhealthy breast tissue before it becomes cancerous With wisdom comes power More women need to be empowered with good up to date preventative information and this book Saving Tatas provides just that
