Care Optimizing Outcomes for Mothers, Children, & Families Susan Ward, Shelton Hisley, 2015-06-03 It offers the perfect balance of maternal and child nursing care with the right depth and breadth of coverage for students in today's maternity pediatric courses. A unique emphasis on optimizing outcomes evidence based practice and research supports the goal of caring for women, families and children not only in traditional hospital settings but also wherever they live, work, study or play. Clear, concise and easy to follow, the content is organized around four major themes: holistic care, critical thinking, validating practice and tools for care that help students to learn and apply the material. **Primary Care of the Premature**

Infant Dara Brodsky, Mary Ann Ouellette, 2008-01-01 Our understanding of the management of diseases in the premature infant has changed dramatically in recent years and it can be quite difficult to remain up to date on changes in this highly scientific field. Dr. Brodsky and Ms. Ouellette have worked together to create a comprehensive reference that covers both the pathophysiology and epidemiology of problems occurring in premature babies in the Neonatal Intensive Care Unit and the management of these problems once the infant has been released from the NICU to a community practice. The book emphasizes specific diseases that affect premature infants and focuses on two primary categories: background and management in the NICU and management of specific illnesses after discharge from the NICU. Find information quickly using an up to date summary of the problems that are likely to affect the premature infant. Review helpful guidelines on feeding and growth, neurologic outcomes, developmental problems, retinopathy of prematurity, bronchopulmonary dysplasia and much more. Use easy to follow management algorithms to help diagnose and manage common issues in premature infants after discharge. Make effective decisions about screening, immunizations, counseling of parents and more. Help families deal with the emotional impact of caring for a premature infant. Access a list of disease specific websites for clinicians and families.

Nutritional Strategies for the Very Low Birthweight Infant David H. Adamkin, 2009-08-27 The goal of nutritional management in VLBW and ELBW infants is the achievement of postnatal growth at a rate that approximates the intrauterine growth of a normal fetus at the same postconceptional age. In reality, however, growth lags considerably after birth, although non-nutritional factors are involved; nutrient deficiencies are critical in explaining delayed growth. This practical, clinically oriented pocketbook reviews and summarises all available clinical evidence. It enables the reader to implement parenteral or enteral feeding plans with the goals of reducing postnatal weight loss, earlier return to birthweight and improved catch-up growth. Both nutrient balance and growth and the impact on neurodevelopment and health outcomes are evaluated. With many tables and algorithms to summarise key data and management strategies, *Nutritional Strategies for the Very Low Birthweight Infant* is an invaluable guide for all healthcare professionals caring for premature babies. **Challenges,**
