Fogarty International Center for Advanced Study in the Health Sciences, 1986 **Handbook of Psychopharmacology** Leslie Iversen, Solomon H. Snyder, 2013-11-11 Volumes 7 and 8 of the Handbook were published in 1977 In Volume 7 methods for studying unconditioned and conditioned behavior were reviewed Attention was given to both ethological methods and operant conditioning techniques as applied to some selected aspects of behavior Genetic developmental and environmental factors influencing behavior were also discussed In Volume 8 neurotransmitter systems and in particular brain circuits were discussed in relation to behavior and to the effects of psychoactive drugs on behavior The coverage was not exhaustive because of space limitations The topics selected for review were at the time the focus of considerable experimental effort they included homeostasis motivated behaviors sleep locomotion feeding drinking and sexual behavior Brain dopamine systems were therefore discussed in depth since they were already known to be centrally involved in motivated behaviors Learning mechanisms and emotion were reviewed in the remaining chapters In 1984 we initiated an update of behavioral pharmacology to review areas of progress within the same scope as the earlier volumes This update continues in Volume 19 Among the contributions are several that represent important advances in analyzing behavior and the

use of more sophisticated methods to define the effect of drugs on particular aspects of behavior The chapters by Blundell on feeding and Miczek on aggression illustrate the sophistication of modern ethopharmacology *Hormones and Aggressive Behavior* Bruce B. Svare, 2013-03-07 This volume is an overview of research examining the relationship between hormones and aggressive behavior The last 15 years have witnessed a tremendous growth of knowledge in this area yet reviews written by specialists are virtually nonexistent This work is an attempt to provide a comprehensive and cohesive synthesis of this literature Chapters 1-7 provide an analysis of hormonal influences on the major forms of aggressive behavior including intermale interfemale shock induced maternal territorial and predatory aggression The focus of Chapters 8-12 is an examination of the mechanisms through which hormones might act to produce changes in agonistic responding Genetic developmental neural and biochemical influences are considered It is well known that environment social context and experience modulate the effects of hormones on behavior Thus Chapters 13-15 are designed to review the literature concerning hormone pheromone interactions hormonal responses to competition and the influence of social context on the endocrine system and aggressive behavior Frequently the principles advanced by behavioral endocrinologists are based on research in one species the rodent To provide a more comparative perspective and to examine specifically the generality of those principles generated for rodents Chapters 16-22 examine hormone aggression relationships in a variety of species including fish birds amphibians reptiles infrahuman primates humans ungulates and insects This volume should be useful to both beginning and advanced researchers in animal behavior behavioral endocrinology physiological psychology neuroendocrinology zoology physiology and psychiatry
