Reaching Learners Through Telecommunications Management And Leadership Strategies For Higher Education:

Reaching Learners Through Telecommunications Becky S. Duning, Marvin J. Van Kekerix, Leon M. Zaborowski, 1993-02-15

The advent of new telecommunications technologies and a growing recognition of their potential for meeting educational needs has raised many questions about how to integrate telecommunications with existing educational programs. But there is much confusion among educators about where to begin and how to proceed. What skills and experience are required? How should costs be projected, allocated, and offset? How is telecommunications-based education aligned with the current structure and mission of an institution? What standards of quality should be applied? In this book, the authors offer nontechnical professionals a comprehensive guide to the process of integrating, implementing, and maintaining telecommunications-based education in their institutions and organizations. *Reaching Learners Through Telecommunications* offers practical advice to novice and experienced managers on every phase of administering a telecommunications-based education program, including analyzing the appropriateness of telecommunications-based education for the individual institution, determining typical expenditures and revenue sources for telecommunications-based educational programs using one of the master budget formats provided in the book, creating a marketing strategy that successfully integrates telecommunications into the current educational marketplace, and building a comprehensive resource information base of publications, associations, conferences, and agencies. This book will prove to be a valuable resource for managers of educational telecommunications systems, deans and directors of continuing higher education, administrators of distance education and postsecondary education programs, educators at the primary, secondary, and postsecondary levels, business professionals in private and public industry, and business and education consultants.

Building a Working Policy for Distance Education Connie L. Dillon, 1997-11-30
Distance education offers the potential to further the mission of the community college in significant ways. However, the practice of education will not change without corresponding changes in our fundamental views of teaching and learning, as these are reflected in the total of our state, federal, and institutional policies. In many ways, the community college offers other sectors of higher education a vision for the future. This issue of *New Directions for Community Colleges* presents some of the policy issues confronting higher education in the age of distance learning and discusses the implications of these issues for the community college. This is the 99th issue of the quarterly journal *New Directions for Community Colleges*. For more information on the series, please see the Journals and Periodicals section.
