environment are exposed to extreme conditions of radiation temperature and or corrosion and in many cases the combination
of these makes the material behavior very different from conventional materials This is evident for the four major
technological challenges the nuclear technology domain is facing currently i long term operation of existing Generation II
nuclear power plants ii the design of the next generation reactors Generation IV iii the construction of the ITER fusion
reactor in Cadarache France iv and the intermediate and final disposal of nuclear waste In order to address these challenges
engineers and designers need to know the properties of a wide variety of materials under these conditions and to understand
the underlying processes affecting changes in their behavior in order to assess their performance and to determine the limits
of operation Comprehensive Nuclear Materials Second Edition Seven Volume Set provides broad ranging validated
summaries of all the major topics in the field of nuclear material research for fission as well as fusion reactor systems
Attention is given to the fundamental scientific aspects of nuclear materials fuel and structural materials for fission reactors
waste materials and materials for fusion reactors The articles are written at a level that allows undergraduate students to
understand the material while providing active researchers with a ready reference resource of information Most of the

chapters from the first Edition have been revised and updated and a significant number of new topics are covered in completely new material During the ten years between the two editions the challenge for applications of nuclear materials has been significantly impacted by world events public awareness and technological innovation Materials play a key role as enablers of new technologies and we trust that this new edition of Comprehensive Nuclear Materials has captured the key recent developments Critically reviews the major classes and functions of materials supporting the selection assessment validation and engineering of materials in extreme nuclear environments Comprehensive resource for up to date and authoritative information which is not always available elsewhere even in journals Provides an in depth treatment of materials modeling and simulation with a specific focus on nuclear issues Serves as an excellent entry point for students and researchers new to the field
