Pleasure Kenny Pieper, 2016-12-01 In *Reading for Pleasure* Kenny Pieper has gathered a range of tried and tested strategies to get kids reading and enjoying it. We hear too often that kids don't read any more. Kenny thinks it should be every teacher's mission to prove this isn't true. In a squeezed curriculum it can be tempting to accept pupils' lack of reading and make excuses that there is not enough time to give to the luxury of personal reading. Teachers do this at our peril. Reading is the essential building block of further literacy development as well as a skill, hobby and habit that we can take with us forever. Kenny Pieper takes the act of reading for granted as many, but sadly not all adults do. You're reading this right now. However, this isn't the case for everyone. Kenny teaches kids whose lives are terrifying obstacle courses of reading-related problems. They know they struggle with reading so they try to avoid reading at all costs. They leave school not merely unaffected by this strange reading thing but saddled with a great deal of emotional baggage about being an outsider, even more entrenched in a belief that reading is for others more intelligent than them. Then there are the children who can read perfectly well but chose not to, unconvinced of the importance of reading in their lives. What difference does it make to them? We have to answer that question in school. We have a duty to put an end to illiteracy and aliteracy. Kids need reading role models and as a teacher that role model is you. You may be the only adult who that reluctant reader will ever see reading. Teachers are critical in giving all children the gift of being able to read well and to value reading. Topics covered include the author's personal reading journey, how reading enabled him to become the first person in his family to go to university and convinced him that fostering a love of reading is his moral duty as an educator, illiteracy and aliteracy, reluctant readers, book reviews, prioritising personal reading by devoting ten minutes each lesson to it, habitual reading, the reading environment, interest inventories, technology e-readers, Accelerated Reader programmes, recommended reading, building a class library, bookmarks, book tweets, book speed dating, libraries, librarians, literacy and class inequality, parental involvement, podcasting, reading records, reading dialogue journals, the rights of the reader, reading aloud, silent reading and literacy and gender amongst others. The benefits we can all reap when kids become confident readers who read for pleasure are obvious. Discover strategies which will get kids talking about books, get them thinking about books, get them reading books, encourage independent reading, develop literacy skills and establish a classroom culture where reading is expected and celebrated. Suitable for primary and secondary teachers, leaders and SENCOs or just anyone with an interest in or responsibility for getting kids to read.

Research for Materials Development in Language Learning Brian Tomlinson, Hitomi Masuhara, 2010-11-18 This title examines current research in materials development and discusses their implications for the learning and teaching of languages. Recently there has been a dramatic increase in the attention given to materials development as an academic discipline. More universities are including modules on materials development on their MA in applied linguistics courses and more students are studying materials development in their PhD research. Yet to date there has been no publication focusing on reporting and discussing the results of research in materials development. This fills that gap, reporting on the results of recent research projects in

materials development and discussing their implications for the learning and teaching of languages The editors introduction outlines the rationale scope and objectives of the book and reviews previously published reports of research in materials development There are concluding chapters which point out implications for second language acquisition theory and research methodology The book features suggest applications of the reported research for materials development and proposals for future action in research in materials development for language teaching Developing a Leadership Role Within the Key Stage 1 Curriculum Julie A. The Space and Practice of Reading Chin Ee Loh,2017-02-10 Mirroring worldwide debates on social class literacy rates and social change this study explores the intersection between reading and social class in Singapore one of the top scorers on the Programme for International Assessment PISA tests and questions the rhetoric of social change that does not take into account local spaces and practices This comparative study of reading practices in an elite school and a government school in Singapore draws on practice and spatial perspectives to provide critical insight into how taken for granted practices and spaces of reading can be in fact unacknowledged spaces of inequity Acknowledging the role of social class in shaping reading education is a start to reconfiguring current practices and spaces for more effective and equitable reading practices This book shows how using localized contextualized approaches sensitive to the home school national and global contexts can lead to more targeted policy and practice transformation in the area of reading instruction and intervention Chapters in the book include Becoming a Reader Home School Connections Singaporean Boys Constructing Global Literate Selves School Nation Connections Levelling the Reading Gap Socio Spatial Perspectives The book will be relevant to literacy scholars and educators library science researchers and sociologists interested in the

intersection of class and literacy practices in the 21st century

CMOS Processors and Memories Krzysztof Iniewski, 2010-08-09 CMOS Processors and Memories addresses the state of the art in integrated circuit design in the context of emerging computing systems New design opportunities in memories and processor are discussed Emerging materials that can take system performance beyond standard CMOS like carbon nanotubes graphene ferroelectrics and tunnel junctions are explored CMOS Processors and Memories is divided into two parts processors and memories In the first part we start with high performance low power processor design followed by a chapter on multi core processing They both represent state of the art concepts in current computing industry The third chapter deals with asynchronous design that still carries lots of promise for future computing needs At the end we present a hardware design space exploration methodology for implementing and analyzing the hardware for the Bayesian inference framework This particular methodology involves analyzing the computational cost and exploring candidate hardware components proposing various custom architectures using both traditional CMOS and hybrid nanotechnology CMOL The first part concludes with hybrid CMOS Nano architectures The second memory part covers state of the art SRAM DRAM and flash memories as well as emerging device concepts Semiconductor memory is a good example of the full custom design that applies various analog and logic circuits to utilize the memory cell s device physics Critical physical effects that include tunneling hot electron injection charge trapping Flash memory are discussed in detail Emerging memories like FRAM PRAM and ReRAM that depend on magnetization electron spin alignment ferroelectric effect built in potential well quantum effects and thermal melting are also described CMOS Processors and Memories is a must for anyone serious about circuit design for future computing technologies The book is written by top notch international experts in industry and academia It can be used in graduate course curriculum
