Specification and Compositional Verification of Real-Time Systems Jozef Hooman, 1991-11-27 The research described in this monograph concerns the formal specification and compositional verification of real time systems A real time programming language is considered in which concurrent processes communicate by synchronous message passing along unidirectional channels To specify functional and timing properties of programs two formalisms are investigated one using a real time version of temporal logic called Metric Temporal Logic and another which is based on extended Hoare triples Metric Temporal Logic provides a concise notation to express timing properties and to axiomatize the programming language whereas Hoare style formulae are especially convenient for the verification of sequential constructs For both approaches a compositional proof system has been formulated to verify that a program satisfies a specification To deduce timing properties of programs first maximal parallelism is assumed modeling the situation in which each process has its own processor Next this model is generalized to multiprogramming where several processes may share a processor and scheduling is based on priorities The proof systems are shown to be sound and relatively complete with respect to a denotational semantics of the programming language The theory is illustrated by an example of a watchdog timer

Real-Time: Theory in Practice J.W.de Bakker, 1992-06-24 In the past decade the formal theory of specification verification and development of real time programs has grown from work of a few specialized groups to a real bandwagon Many eminent research groups have shifted their interests in this direction Consequently research in real time is now entering established research areas in formal methods such as process algebra temporal logic and model checking This volume contains the proceedings of a workshop dedicated to the theory of real time with the purpose of stepping back and viewing the results achieved as well as considering the directions of ongoing research The volume gives a representative picture of what is going on in the field worldwide presented
