Multiprocessor Scheduling for Real-Time Systems Sanjoy Baruah, Marko Bertogna, Giorgio Buttazzo, 2015-01-02 This book provides a comprehensive overview of both theoretical and pragmatic aspects of resource allocation and scheduling in multiprocessor and multicore hard real time systems The authors derive new abstract models of real time tasks that capture accurately the salient features of real application systems that are to be implemented on multiprocessor platforms and identify rules for mapping application systems onto the most appropriate models New run time multiprocessor scheduling algorithms are presented which are demonstrably better than those currently used both in terms of run time efficiency and tractability of off line analysis Readers will benefit from a new design and analysis framework for multiprocessor real time systems which will translate into a significantly enhanced ability to provide formally verified safety critical real time systems at a significantly lower cost

Computer and Information Sciences - ISCIS 2004 Cevdet Aykanat, Tugrul Dayar, Ibrahim Korpeoglu, 2004-10-29 The series of ISCIS International Symposium on Computer and Information Sciences symposia have been held each year since 1986 mostly in Turkey and occasionally abroad It is the main computer science and engineering meeting organized by Turkish academics and was founded by Erol Gelenbe Each year ISCIS attracts a signi cant number of

international participants from all over the world The 19th ISCIS was organized by Bilkent University Department of Computer Engineering and was held in Kemer Antalya Turkey during 27-29 October 2004 For ISCIS 2004 a total of 335 papers went through the review process and a large number of high quality papers competed for acceptance This volume of the Springer Lecture Notes in Computer Science LNCS series contains 100 of those papers that broadly fall into the following areas of interest: artificial intelligence and machine learning, computer graphics and user interfaces, computer networks and security, computer vision and image processing, database systems, modeling and performance evaluation, natural language processing, parallel and distributed computing, real time control applications, software engineering and programming systems and theory of computing

Advances in Web-Age Information Management Xiaofeng Meng, Jianwen Su, Yujun Wang, 2003-08-02 This book constitutes the refereed proceedings of the Third International Conference on Web Age Information Management WAIM 2002 held in Beijing China in August 2002 The 40 papers presented together with two system demonstrations were carefully reviewed and selected from 169 submissions The papers are organized in topical sections on XML, spatio-temporal databases, data mining and learning XML and web workflows and e-services, bioinformatics, views and OLAP, clustering and high dimensional data, web search optimization and updates and transactions and multimedia

Model-Based Design for Embedded Systems Gabriela Nicolescu, Pieter J. Mosterman, 2018-09-03 The demands of increasingly complex embedded systems and associated performance computations have resulted in the development of heterogeneous computing architectures that often integrate several types of processors: analog and digital, electronic components and mechanical and optical components all on a single chip As a result now the most prominent challenge for the design automation community is to efficiently plan for such heterogeneity and to fully exploit its capabilities A compilation of work from internationally renowned authors Model Based Design for Embedded Systems elaborates on related practices and addresses the main facets of heterogeneous model based design for embedded systems including the current state of the art, important challenges and the latest trends Focusing on computational models as the core design artifact this book presents the cutting edge results that have helped establish model based design and continue to expand its parameters The book is organized into three sections: Real Time and Performance Analysis in Heterogeneous Embedded Systems, Design Tools and Methodology for Multiprocessor System on Chip and Design Tools and Methodology for Multidomain Embedded Systems The respective contributors share their considerable expertise on the automation of design refinement and how to relate properties throughout this refinement while enabling analytic and synthetic qualities They focus on multi-core methodological issues: real time analysis and modeling and validation taking into account how optical, electronic and mechanical components often interface Model based design is emerging as a solution to bridge the gap between the availability of computational capabilities and our inability to make full use of them yet This approach enables teams to start the design process using a high level model that is gradually refined through abstraction levels to ultimately yield a prototype

When executed well model based design encourages enhanced performance and quicker time to market for a product. Illustrating a broad and diverse spectrum of applications such as in the automotive aerospace health care consumer electronics this volume provides designers with practical readily adaptable modeling solutions for their own practice.
