Paradox in 1992 Misuse of antibiotics resulting in increased bacterial resistance had previously been recognized in the infectious disease community However Dr Levy s eloquent public warning about the shrinking efficacy of our antibi otic armamentarium served to alert the lay person to the potential consequences of this de mise in useful therapy Because of the proliferation of diverse antibiotic classes with increasing potency and broader activity spectra it had been assumed that any ordinary bacterial infection could be eradicated with the proper selection of drug However it has become evident that we are surrounded by resistant bacteria many of which were introduced unwittingly into our en vironment through the unnecessary use of antibiotics When it became evident that a number of people were returning for multiple visits to their family physicians for persist ent ear infections or non responsive bronchitis questions were raised about the antibiotic treatments that were being prescribed Bacteria resistant to common antibiotic regimens were being isolated more frequently often as organisms classified as multi resistant with decreased susceptibilities to two or more structural classes of agents Nosocomial spread of these resistances was aided by the transmission of plasmid mediated resistance factors between species
