Neuropeptide Systems as Targets for Parasite and Pest Control Timothy G. Geary, Aaron Maule, 2011-01-13 The need to continually discover new agents for the control or treatment of invertebrate pests and pathogens is undeniable Agriculture both animal and plant succeeds only to the extent that arthropod and helminth consumers vectors and pathogens can be kept at bay Humans and their companion animals are also plagued by invertebrate parasites The deployment of chemical agents for these purposes inevitably elicits the selection of resistant populations of the targets of control necessitating a regular introduction of new kinds of molecules Experience in other areas of chemotherapy has shown that a thorough understanding of the biology of disease is an essential platform upon which to build a discovery program Unfortunately investment of research resources into understanding the basic physiology of invertebrates as a strategy to illuminate new molecular targets for pesticide and parasiticide discovery has been scarce and the pace of introduction of new molecules for these indications has been slowed as a result An exciting and so far unexploited area to explore in this regard is invertebrate neuropeptide physiology This book was assembled to focus attention on this promising field by compiling a comprehensive review of recent research on neuropeptides in arthropods and helminths with contributions from many of the leading laboratories working on these systems

Tam, 2000 This book represents the achievements of current peptide science research in China over the last two years The International Chinese Peptide Symposium is an academic meeting held every two years and this 5th meeting 5th CPS 98 was held on July 14 17 1998 in Lanzhou Gansu China hosted by Lanzhou University The 5th PCS 98 was represented by over 150 participants including 30 scientists from nine countries outside China This book contains the keynote lectures and the vast majority of the oral presentations It covers the highest level of Chinese peptide research and as such should be of great interest to any peptide scientist

Reproductive Biology of Invertebrates, Vol. 12, Part B A S Raikhel, 2005-01-01 This book discusses the major accomplishments made in elucidating vitellogenic events at the cellular biochemical and molecular biological levels It is helpful for researchers and students interested in reproduction of invertebrates

Insecticides Design Using Advanced Technologies Isaac Ishaaya, Ralf Nauen, A. Rami Horowitz, 2007-02-15 In the past insecticide development has been guided mostly by chemo rational and bio rational design based on understanding of the physiology and ecology of insects and crops A limitation in each new class of compounds is the evolution of resistance in populations of key pests which ultimately leads to control failures This phenomenon and the desire to produce more selective and biorational compounds serve as the driving force to develop advanced technologies for insecticide design Among the highlights of this book are the use of nanotechnology to increase potency of available insecticides the use of genetic engineering techniques for controlling insect pests the development of novel insecticides that bind to unique biochemical receptors the exploration of natural products as a source for environmentally acceptable insecticides and the use of insect genomics and cell lines for

determining biological and biochemical modes of action of new insecticides *The Biology and Fisheries of the Slipper Lobster* Kari L. Lavalli, Ehud Spanier, 2007-01-24 Written by international experts *The Biology and Fisheries of the Slipper Lobster* provides comprehensive coverage of the known biology ecology behavior physiology evolutionary history and genetics of the numerous species in the family Scyllaridae It covers fishing methods and regulations size and composition of catches fisheries management Physiological Systems in Insects Marc J. Klowden, 2010-07-26 As the largest living group on earth insects can provide us with insight into adaptation evolution and survival The 2nd edition of this standard text for insect physiology courses and entomologists provides the most comprehensive analysis of the systems that make insects important contributors to our environment *Physiological Systems in Insects* discusses the role of insect molecular biology neuroendocrinology biochemistry and genetics in our understanding of insects Organized according to insect physiological functions this book is fully updated with the latest and foundational research that has influenced understanding of the patterns and processes of insects Full update of a widely used text for students and researchers in entomology and zoology Includes recent research that uses molecular techniques to uncover physiological mechanisms Includes a glossary of physiological terms New extended section on locomotive systems Provides abundant figures derived from scientific reports

Understanding Biology Using Peptides Sylvie E. Blondelle, 2007-10-23 This book represents proceedings of the 19th American Peptide Symposium It highlights many of the recent developments in peptide science with a particular emphasis on how these advances are being applied to basic problems in biology and medicine Specific topics covered include novel synthetic strategies peptides in biological signaling post translational modifications of peptides and proteins and peptide quaternary structure in material science and disease **Behavioural Ecotoxicology** Giacomo Dell'Omo, 2002-05-22

Behavioural ecotoxicology is an emerging field dealing with the effects of environmental pollutants on the behaviour of animals Behavioural techniques derived from experimental psychology behavioural pharmacology and neurotoxicology are applied to detect and characterise changes in animals living in the environment exposed to various pollutants Behavioural effects are then interpreted in an ecological context considering the long term relevance of these changes at both the individual and population level *Lobsters: Biology, Fisheries and Aquaculture* E. V. Radhakrishnan, Bruce F.

Phillips, Gopalakrishnan Achamveetil, 2019-11-28 This book is an important addition to the knowledge of lobster research The book complements other books published on lobster research and management as it focuses on Indian lobster fisheries and aquaculture developments where there have been nearly 350 research papers and reports and 19 PhD awards The book has 15 chapters written by international experts covering many aspects of the biology of a number of spiny and slipper lobster species occurring in India and world oceans with maps illustrating global distribution of spiny lobster families genera and species An updated taxonomy and checklist of marine lobsters the status and management of lobster fisheries in India and Indian Ocean Rim countries and a review of aquaculture research in India and other major countries have also been

presented The book is timely as the 2nd International Indian Ocean Expedition IIOE is currently underway 2015 2020 50 years after the original IIOE 1959 1965 with some of the original lobster research on the biology and distribution of phyllosoma larvae being undertaken on the plankton samples collected during the first IIOE Many of the chapters are contributed by the authors from Central Marine Fisheries Research Institute CMFRI which has been collecting fishery and biological data on lobsters since 1950 when lobster fishing began on a subsistence scale followed by some industrial fishing for lobsters in different parts of India Unfortunately the development of some of these lobster fisheries was followed by overfishing due to lack of enforcement of regulations The book provides a valuable addition to our knowledge of the biology fisheries and aquaculture of spiny and slipper lobsters

Bioenergetics and Energy Metabolism in Crustaceans

Bhaskar L.V.K.S.,2016-02-04 Bioenergetics is the study of balance between energy supply and energy expenditure and requires an examination of physiological processes through which energy is transformed in living organisms Studies on the flow and allocation of energy in biological systems often have as their ultimate goal the construction of a budget describing the partitioning of energy within an individual or population Such budgets are then used to make inference about physiology or ecology in particular explaining why an organism or population does what it is observed to do assuming that energy allocation is the overriding concern Bioenergetic modelling is an alternative method for estimating feeding rates in a natural population These models quantify the relationship between feeding rates and growth relative to temperature body size and activity Bioenergetic models have been applied to address ecological questions in a wide variety of taxa
