Modeling the Human Well-being Benefits of Ecosystem Restoration and Management for Environmental Decision Making Susan Harrell Yee, Matt Harwell, Marc Russell, Joel Christopher Hoffman, Tammy

Newcomer-Johnson, 2024-08-28 Human well being is inextricably linked to the condition of the natural environment Environmental management decisions often aim to maintain ecosystems in a healthy and resilient condition while providing the ecosystem goods and services that humans want and need Models methods frameworks and metrics are needed to characterize and forecast the potential benefits from remediation restoration and revitalization that improve human health and well being through the delivery of ecosystem services However ecosystems are complex and layering on social and economic considerations can make environmental decision making seem intractable Dynamics of socio ecological systems are complicated making models a pivotal tool for identifying and quantifying relationships assessing historical patterns and forecasting alternative decision scenarios The goal of this Research Topic is to leverage modeling approaches to provide science based evidence metrics and frameworks and methods for quantifying how restored ecosystem goods and services lead to benefits for public health community well being and economic vitality Modeling approaches may range in complexity from conceptual models to statistical models to dynamic process models empirically derived to mechanistic to participatory Research will evaluate connections between ecosystem condition ecosystem services and human health and well being and may include covarying socio economic or biophysical factors that modify relationships between ecosystem health and perceived or realized benefits Applications or case studies will demonstrate how to integrate community priorities with

nature based solutions to enhance benefits of environmental remediation ecological restoration community revitalization and climate resilience decisions

Environmental Risk Assessment of Genetically Modified Organisms K.R. Hayes,S. Li,2007 The decline of many individual and wild fish stocks has commanded an increase in aquaculture production to meet the protein demands of a growing population Alongside selective breeding schemes and expanding facilities transgenic methods have received increasing attention as a potential factor in meeting these demands With a focus on developing countries this third text in the series provides detailed information on environmental biosafety policy and regulation and presents methodologies for assessing ecological risks associated with transgenic fish Publisher website http://www.cabi.org/bk_BookDisplay.asp?PID=2054 viewed 6 December 2007

Systems Engineering and management for Sustainable Development - Volume II Andrew P. Sage,2009-09-30 Systems Engineering and Management for Sustainable Development is a component of Encyclopedia of Technology Information and Systems Management Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias This theme discusses basic principles of systems engineering and management for sustainable development including cost effectiveness assessment decision assessment tradeoffs conflict resolution and negotiation research and development policy industrial ecology and risk management strategies for sustainability The emphasis throughout will be upon the development of appropriate life cycles for processes that assist in the attainment of sustainable development and in the use of appropriate policies and systems management approaches to ensure successful application of these processes The general objectives of these chapters is to illustrate the way in which one specific issue such as the need to bring about sustainable development necessarily grows in scope such that it becomes only feasible to consider the engineering and architecting of appropriate systems when the specific issue is imbedded into a wealth of other issues The discussions provide an illustration of the many attributes and needs associated with the important task of utilizing information and knowledge enabled through systems engineering and management to engineer systems involving humans organizations and technology in the support of sustainability These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs
