LONG-WAVE RHYTHMS IN ECONOMIC DEVELOPMENT AND POLITICAL BEHAVIOR

Leonid Grinin, Andrey Korotayev

Long-Wave Rhythms in Economic Development and Political Behavior Brian J. L. Berry, 1991 Is economic development a random walk or do underlying rhythms and cycles make it possible to anticipate long term trends Many social scientists have rejected the notion of long term periodicity in economic trends Now after extensive analysis of economic data distinguished scholar Brian J L Berry has found new evidence for the reliability and the value of long wave theory In Long Wave Rhythms in Economic Development and Political Bahavior Berry argues that the synchronization of long waves and growth cycles is more than a figment of some overactive imagination Presenting his findings graphically he argues that there is persuasive evidence of the existence of deterministic chaos Applying his analysis of rates of change to the economic phenomena of prices Kondratiev cycles and growth Kuznets cycles he discovers that pairs of 25 year growth cycles are embedded within 55 year long waves As a result Berry concludes two different kinds of growth cycles one inflationary and the other deflationary form a complementary pattern of alternating crises with stagflation and depression Berry also explores the shifting sand of cyclical phenomena in the stock market voting behavior the incidence of wars the rise and fall of great powers and mass psychologies While avoiding dogmatic conclusions he offers a provocative discussion of the long wave context of social phenomena As he examines the American economy in long wave context Berry optimistically asserts that the bust is not inevitable Technological advances in information transfer enable leaders and organizations to anticipate and alleviate the adverse effects of economic cycles Like it or not he writes our lives appear to be embedded in a higher order of complexity collectively we are a societal organism that displays self regulating fluctuations around a path of growth Waves of Growth, Hegemonic Power, and Climate Change in the World Economy Phillip Anthony O'Hara, 2025-10-02 This book investigates eras of major geopolitical and socioeconomic power development relative demise and potential renewal for four major political economies It concentrates on the Dutch Golden Age of the late 1500s and 1600s British hegemony of the 1800s Pax Americana of the 1900s and Chinese potential hegemony of the 2000s as well as long wave patterns of change over successive centuries to the present and to some degree into the future Dutch British US and Chinese economies are situated within patterns of long term successive rise and fall and fall and rise of economic growth hegemony and climate change in the world political economy including linkages between core periphery and semi periphery Patterns of multiple crises tend to appear in between hegemonic periods and climate change often undergoes complex dynamics through time while currently climate anomalies are emerging during mostly long wave downswings and polycrises in the world economy Contemporary themes of the book include the ongoing competition for world domination between the US and China the conflict over Ukraine Taiwan that some think may generate world war 3 the climate change crisis that continues to plague the world and whether the world and its major economies are likely to undergo a Golden Age into the future Chapter 7 of this book on US hegemony and long waves includes extracts of material that won the Myrdal Prize for Book of the Year Prize from EAEPE as well as Journal Article of the Year from Curtin Business School Ideas from parts of Chapter 9 emanate from a volume that won Book of the Year Award from CBS A climate change paper that won Journal Article of the Year Awards from EAEPE and CBS informed ideas that are used in several parts of this book The book outlines key stylized facts from the analysis and presents hypotheses for further investigation on the relationship between long term growth hegemony and climate change The book uses the work of Kondratiev Schumpeter and company themes in economic history modern political economy schools and the principles of political economy contingency paradigm to reformulate long wave hegemony and The Dog Bone Portfolio Margret Kopala, John Budden, 2015-06-01 Like so many climate change hypotheses and empirics of us Margret Kopala lost a significant portion of her life savings in the stock market crash of 2008 Unlike us however she went on a long and intense financial odyssey to find out what caused the losses and what she could do to protect herself in the future Armed with her skills as a journalist and public policy analyst fueled by equal measures of fear and determination and mentored by successful investment strategist and financial broadcaster John Budden Kopala researched and wrote this magisterial analysis of how Russian economist Nikolai Kondratieff's long wave theory is playing out in what many today describe as a financial Winter Along the way she is introduced to financial experts familiar with Kondratieff scholarship John Budden's interviews in the book with Dean LeBaron J Anthony Boeckh Ian Gordon Larry Jeddeloh Don Lindsey the late Lord William Rees Mogg Jim Rogers Eric Sprott and Ronald Peter St ferle show how investors must put a new spin on asset allocation and security of their assets like a dog that buries bones in different places we would be advised to allocate our assets to different parts of the world and to ensure that a good portion of those assets include gold the only continuous basis of wealth across history and around the world Kopala explores the global national and personal effects of overconsumption underproduction energy and innovation the printing of money to save the economy competitive devaluations deflation reflation and inflation and war the ultimate economic crisis She documents those technologies that seeded previous New Economy Spring seasons from the era of canals to those of railroads automobiles and infotech and probes today s innovations most likely to seed the Next New Economy that we desperately need if we are to escape the doldrums of the current financial Winter With trenchant explanations of how individuals can achieve portfolio strength by first preserving capital then being vigilant about the financial effects of politics economic theory culture and our own choices The Dog Bone Portfolio is a gift to investors policy makers and ultimately nations everywhere *Infrastructure and the Complexity of Economic Development* David F. Batten, Charlie Karlsson, 2012-12-06 The book examines the complex relationships between infrastructure and the rest of the economy In particular it focuses on the contentious issue of whether infrastructure investments stimulate productivity growth issues of pricing and ownership and also development problems such as environmental damage Methods range from traditional production function models and compensating variation approaches to nonlinear methods of dynamic analysis There is a unique emphasis on the ability of these different methods to allow for the complex interdependencies

involved Six of the fifteen papers deal with these methodological aspects whereas the remainder addresses specific cases or examples in a variety of countries Europe USA and developing countries Economic Cycles, Crises, and the Global Periphery Leonid Grinin, Andrey Korotayev, Arno Tausch, 2016-10-25 This thought provoking monograph analyzes long medium and short term global cycles of prosperity recession and depression plotting them against centuries of important world events Major research on economic and political cycles is integrated to clarify evolving relationships between the global center and its periphery as well as current worldwide economic upheavals and potential future developments Central to this survey are successive waves of industrial and later technological and cybernetic progress leading to the current era of globalization and the changes of the roles of both Western powers and former minors players however that will lead to the formation of the world order without a hegemon Additionally the authors predict what they term the Great Convergence the lessening of inequities between the global core and the rest of the world including the wealth gap between First and Third World nations Among the topics in this ambitious volume Why politics is often omitted from economic analysis Why economic cycles are crucial to understanding the modern geopolitical landscape How the aging of the developed world will affect world technological and economic future p The evolving technological forecast for Global North and South Where the U S is likely to stand on the future world stage Economic Cycles Crises and the Global Periphery will inspire discussion and debate among sociologists global economists demographers global historians and futurologists This expert knowledge is necessary for further research proactive response and preparedness for a new age of sociopolitical change and World Security Tessaleno C. Devezas, 2006 Considerable progress has been made in understanding the underlying mechanisms driving the long wave behaviour of the world socioeconomic development A controversial mechanism discussed is the close relationship between K waves and the outbreak of majors wars Sectors Matter! Stefan Mann. 2011-06-10 Although all economic activities take place in sectors economists often devote little attention to differences between and characteristics of sectors This book tries to show that mesoeconomics the economic exploration of sectors and groups is a useful instrument of analysis between microeconomics the analysis of markets and macroeconomics the analysis of economies In order to do so economists and social scientists from related disciplines and coming from Europe Australia and Asia demonstrate that sectors matter for economic development and the formation of societies The book includes chapters with rigorous economic analysis outlooks on economic history and case studies in order to show the relevance of sectoral issues this broad range of content making it likely the most comprehensive book on mesoeconomics to date Chaos Theory in the Social Sciences L. Douglas Kiel, Euel W. Elliott, 2009-11-10 Chaos Theory in the Social Sciences Foundations and Applications offers the most recent thinking in applying the chaos paradigm to the social sciences The book explores the methodological techniques and their difficulties for determining whether chaotic processes may in fact exist in a particular instance and examines implications of chaos theory when applied specifically to political science economics and sociology

The contributors to the book show that no single technique can be used to diagnose and describe all chaotic processes and identify the strengths and limitations of a variety of approaches The essays in this volume consider the application of chaos theory to such diverse phenomena as public opinion the behavior of states in the international arena the development of rational economic expectations and long waves Contributors include Brian J L Berry Thad Brown Kenyon B DeGreene Dimitrios Dendrinos Euel Elliott David Harvey L Ted Jaditz Douglas Kiel Heja Kim Michael McBurnett Michael Reed Diana Richards J Barkley Rosser Jr and Alvin M Saperstein L Douglas Kiel and Euel W Elliott are both Associate Professors of Government Politics and Political Economy University of Texas at Dallas The Elgar Companion to Urban Infrastructure Governance Finger, Matthias, Yanar, Numan, 2022-04-22 A comprehensive overview of the governance of urban infrastructures this Companion combines illustrative cases with conceptual approaches to offer an innovative perspective on the governance of large urban infrastructure systems Chapters examine the challenges facing urban infrastructure systems including financial economic technological social ecological jurisdictional and demand Innovative Behaviour in Space and <u>Time</u> Cristoforo S. Bertuglia, Silvana Lombardo, Peter Nijkamp, 2012-12-06 In the past decade there has been growing recognition that economic development is not mainly exogenously determined but to a large extent is a transformation process induced and governed by economic actors who respond to competitive institutional and political challenge This challenge and response model is increasingly accepted as a valid analytical framework in modem growth theory and also explains the popularity of endogenous growth approaches to technological innovation issues However a major and as yet largely under researched topic is the question of the diffusion and adoption of new technological changes in the context of space time dynamics This diffusion and adoption pattern has obviously clear spatial and temporal variations connected with behavioural responses which may vary over time and different locations This means that a closer analysis of spatio temporal opportunities and impediments is necessary in order to fully map the complex interactions of technology and economy in space and time This volume sets out to bring together a collection of original contributions commissioned by the editors to highlight the spatio temporal patterns and backgrounds of the diffusion and adoption of new technologies Some are in the nature of a survey others have a modelling background and again others are case studies The contributions originate from different countries and different disciplines This book is complementary to a previously published volume on technological innovation Technological Change Economic Development and Space edited by C S Bertuglia M M Fischer and G Preto and also published by Springer Verlag 1995 **Selling Your Business** Louis P. Crosier, 2004-06-02 Twenty three top advisors from leading firms show entrepreneurs how to transition their business The Entrepreneur s Transition provides an all in one handbook for entrepreneurs and corporate insiders seeking advice on their personal financial planning prior to selling or taking a business public It provides a concise easy to read blueprint that can help business leaders navigate before and after a transaction so they are well positioned and can avoid costly mistakes The Entrepreneur's Transition is organized

chronologically beginning with the issues a business owner should be concerned with prior to a transaction It then moves step by step through the transaction process and into post transaction diversification reinvestment and philanthropy Louis Crosier Boston MA is a principal at Windward Investment Management and serves as a member of Windward's Investment Committee His responsibilities include managing client portfolios and overseeing the firm's investment consulting practice

The Dynamics of New Firm Formation Vinod Sutaria, 2017-11-22 This title was first published in 2001 The dynamics of New Firm Formation NFF are central to the phenomenon of economic growth and development While the economic importance of NFF has been recognized the mechanisms that drive NFF are not well documented or understood Illustrated by an in depth case study from Texas this volume analyzes the relationships between NFF and its localized context Using specially formulated fixed effects regression models the study brings about controversial new findings These provide a counterpoint to the neoclassical theory that there is an adversarial relationship between small and large firms by instead suggesting that the relationship is more of a symbiotic one Furthermore it suggests that deep churning the turnover and replacement in a business base is a key factor in understanding the forces shaping regional economies **Globalization** Eric Sheppard, 2016-06-24 This book summarizes how globalizing capitalism the economic system now presumed to dominate the global economy can be understood from a geographical perspective This is in contrast to mainstream economic analysis which theorizes globalizing capitalism as a system that is capable of enabling everyone to prosper and every place to achieve economic development From this perspective the globalizing capitalism perspective has the capacity to reduce poverty Poverty's persistence is explained in terms of the dysfunctional attributes of poor people and places A geographical perspective has two principal aspects Taking seriously how the spatial organization of capitalism is altered by economic processes and the reciprocal effects of that spatial arrangement on economic development and examining how economic processes co evolve with cultural political and biophysical processes From this globalizing capitalism tends to reproduce social and spatial inequality poverty s persistence is due to the ways in which wealth creation in some places results in impoverishment elsewhere The Great Powers and Global Struggle, 1490-1990 Karen A. Rasler, William R. Thompson, 2021-10-21 In The Great Powers and Global Struggle Karen A Rasler and William R Thompson focus on two themes the rise and fall as well as the relative decline of major world powers over the past five hundred years and the way in which these processes have set the stage for the outbreak of global war Their interdisciplinary approach encompasses political science economics sociology geography and history The most significant wars occur when regional leaders historically in Western Europe challenge global leaders By studying the wars of Napoleon Louis XIV Phillip II and the Italian Indian Ocean wars of the sixteenth century through World Wars I and II to the present the authors challenge the long held idea that prosperity leads to over consumption and underinvestment and thus decline a theory traceable to ancient times that remains the principal explanation for global decline today Arguments about global structural change and its

implications abound but rarely is the abstract translated into concrete historical terms with emphases on specific actors and empirical documentation Rasler and Thompson reinterpret the past five hundred years of major power warfare and provide extensive tests of the eighteen generalizations critical to their argument They conclude that those who argue that global war and repositioning are no longer a concern among the major powers lack critical understanding of the behavior that contributes to such conflict A World-Systems Reader Thomas D. Hall, 2000-03-01 This book brings together some of the most influential new research from the world systems perspective The authors survey and analyze new and emerging topics from a wide range of disciplinary perspectives from political science to archaeology Each analytical essay is written in accessible language so that the volume serves as a lucid introduction both to the tradition of world systems thought and the new debates that are sparking further research today **Globalization as Evolutionary Process** George Modelski, Tessaleno Devezas, William R. Thompson, 2007-12-20 The term globalization has gained widespread popularity yet most treatments are either descriptive and or focused on changes in economic interconnectivity. In this volume the concept is seen in broader terms as leading international experts from a range of disciplines develop a long term analysis to address the problems of globalization The editors and contributors develop a framework for understanding the origins and trajectory of contemporary world trends constructing testable and verifiable models of globalization They demonstrate how the evolutionary approach allows us to view globalization as an enterprise of the human species as a whole focusing on the analytical problem of global change and the rules governing those changes The emphasis is not on broad based accounts of the course of world affairs but selectively on processes that reshape the social of the human species the making of world opinion and the innovations that animate these developments Chapters are clustered into four foci One emphasizes the interpretation of globalization as an explicitly evolutionary process A second looks at historical sequences of such phenomena as population growth or imperial rise and decline as processes that can be modeled and not purely described The third cluster examines ongoing changes in economic processes especially information technology A final cluster takes on some of the challenges associated with forecasting and simulating the complexities of globalization processes This innovative and important volume will be of interest to students and scholars across the social sciences concerned with the phenomenon of A Systems-Based Approach to Policymaking Kenyon B. de Greene, 2012-12-06 This book is based on a globalization number of systems concepts of which the following are emphasized here oThe interacting systems of society and the environment are dynamic and evolution ary oEvolution of these systems carries them through stages of differential stability and instability continuity and discontinuity oAssociated with evolution and instability is structural change that is essentially irre versible oThe present is a stage of world transformation that may not have been equaled for decades or even centuries oPolicies and decisions must match the times in the present case the stage of world transformation The time 11 59 59 PM approximately on December 31 2000 has an important symbolic meaning It marks the end of a minute the end of an hour the end of a day the end of a year the end of a decade the end of a century and the end of a millennium The time and date provide a convenient yardstick against which we can evaluate the evolution of our thinking and the adequacy of our assumptions mental models paradigms and policies Will the beginning tum out to be appropriately different from the end We hope that this book is helpful in such evaluation This is a new paradigm book which both presents and advances the new way of thinking about the systems of science technology society economics politics and the environment and actively calls for the replacement of the worn out cognitive sociotechnical paradigm **Great Divergence and Great Convergence** Leonid Grinin, Andrey Korotayev, 2015-05-09 This new monograph provides a stimulating new take on hotly contested topics in world modernization and the globalizing economy It begins by situating what is called the Great Divergence the social technological revolution that led European nations to outpace the early dominance of Asia in historical context over centuries This is contrasted with an equally powerful Great Convergence the recent economic and technological expansion taking place in Third World nations and characterized by narrowing inequity among nations They are seen here as two phases of an inevitable global process centuries in the making with the potential for both positive and negative results This sophisticated presentation examines Why the developing world is growing more rapidly than the developed world How this development began occurring under the Western world's radar How former colonies of major powers grew to drive the world's economy Why so many Western economists have been slow to recognize the Great Convergence The increasing risk of geopolitical instability Why the world is likely to find itself without an absolute leader after the end of the American hegemony A work of rare scope Great Divergence and Great Convergence gives sociologists global economists demographers and global historians a deeper understanding of the broader movement of social and economic history combined with a long view of history as it is currently being made it also offers some thrilling forecasts for global development in the forthcoming decades

<u>The Geography of Transport Systems</u> Jean-Paul Rodrigue, Claude Comtois, Brian Slack, 2009-05-18 Covering methodologies linked with transport geography and addressing networks modes terminals international and urban transportation and environmental impacts this key book provides a comprehensive introduction to this important field

Forecasting Financial Markets Tony Plummer, 2009-12-03 Forecasting Financial Markets provides a compelling insight into the psychology of trading behaviour and shows how following the herd can have disastrous results It demonstrates how your ability to make money in the world s financial markets depends critically on your ability to make decisions independently of the crowd Given the impact of the global credit crunch it has become even more essential to be able to distinguish between short term and longer term trends at a time when panic selling and fire sale purchases are common Forecasting Financial Markets details the three dimensions essential to achieve successful trading including an ability to understand the forces at work in logical terms recognize and neutralize any emotional responses to market fluctuations and design an investment process or trading system that generates objective buy or sell signals Taking the author's latest

research into account this important book provides you with an in depth assessment of the phenomenon of cycles patterns of economic and financial activity and how to use cycles as a forecasting tool including the author's forecasts for when the global economy will emerge from its current downturn
