Look Closely:

Look Closely Laura Caldwell, 2009-05-01 **To Look Closely** Laurie Rubin, 2023-10-10 Whether it's a trickling stream, a grassy slope, or an abandoned rail line, the natural world offers teachers a wonderful resource around which to center creative inquiry-based learning throughout the year. Nobody knows this better than veteran teacher Laurie Rubin. In *To Look Closely: Science and Literacy in the Natural World*, she demonstrates how nature study can help students become careful, intentional observers of all they see, growing into stronger readers, writers, mathematicians, and scientists in the process. Laurie invites you to join her class of twenty-one second graders as they visit a small stream in the woods behind a suburban elementary school, and she shares her reflections on class discussions, activities, and learning experiences. From setting a tone of inquiry-based thinking in the classroom to suggesting specific units of study for reading, writing, and science, Laurie guides teachers step by step through the basics of how to integrate the skills acquired through nature study into every subject. You will also discover all the ways this purposeful work nurtures green citizens who grow up determined to value and protect the natural environment. Filled with student journal entries, narratives, and poems inspired by experiences in the natural world, *To Look Closely* will inspire and encourage you to become a careful observer of your own spot outdoors and embrace nature study for a year or for whatever part of a year is possible for you. This book will change the way you view the world.

Looking Closely through the Forest Frank Serafini, 2014-03-01 Look closely. Look very closely. Is it flakes of oatmeal? A moldy orange? Give up. Just turn the page and lo and behold, it's a spotted toadstool. See what looks like gummy candy revealed as a millipede, a woolly scarf, as frost on leaves, and many more surprises when you look closely through the forest. The *Looking Closely* series takes children on a journey of discovery through four environments: the forest, the shore, the desert, and the garden. Frank Serafini's camera lens enlarges each world through the magic of close-up photography. Young eyes will rediscover our planet as a place of beauty, mystery, and delight. Readers are first challenged to guess the identity of each closeup photograph. The next page reveals the entire photograph of the plant, animal, or natural object, accompanied by a simple but detailed description of the habitat. By inspiring children to ask questions and use their imaginations, these books help build problem-solving skills. They also encourage curiosity about environments that, examined this closely, are full of unexpected wonders. *Look Closer, Draw Better* Kateri Ewing, 2019-03-05 Capture your subjects on paper like never before. *Look Closer, Draw Better* will transform the way you see the subjects of your artwork, lighting the way with practical techniques in a range of mediums. penetrating new definitions of form style and iconography and draws important and sometimes surprising conclusions for example that vision does not always attain to visual culture and that visual culture is not always wholly visible The book uses examples from a variety of cultural traditions from prehistory to the twentieth century to support a theory designed to apply to all human traditions of making artifacts and pictures that is to visual culture as a worldwide phenomenon *A Splendid Future* Daniele Lippi,2021-07-04 Alfred is a normal lad who lives in his very normal tomorrow maybe our tomorrow A world that has changed much perhaps without really changing Looking for social redemption he accepts a proposal that will take him far from home for a long time When he comes back he slowly realizes that things aren't exactly the way he expected them A surprise that in spite of all will urge him to look for answers Alfred is a normal lad who lives in his very normal tomorrow where technology has made giant strides even if these strides have been used by the few who have then distributed it to the many like crumbs to the hungry A society where much has changed perhaps without really changing Alfred like every lad like every man like every human being hopes at least for himself for a better future and that's what he pursues with tenacity and conviction devoured by anguish and desire for redemption When in this uncertain future he's offered such a chance he'll seize it embracing every single aspect and consequence such is his desire to believe in it with all of himself But every medal time out of mind always has two sides and Alfred will have to decide whether or not to face the side that's hidden from him embarking on a quest and investigation fighting against time that he has no more or to accept things as they are and convince himself that everything is actually normal *The Mark of Gnosis* Tom Kane,2001-11 **The Value of Drawing Instruction in the Visual Arts and Across Curricula** Seymour Simmons III,2021-03-29 By applying philosophical and historical perspectives to drawing instruction this volume demonstrates how diverse teaching methods contribute to cognitive and holistic development applicable within and beyond the visual arts Offering a new perspective on the art and science of drawing this text reveals the often unrecognized benefits that drawing can have on the human mind and thus argues for the importance of drawing instruction despite and even due to contemporary digitalization Given the predominance of visual information and digital media visual thinking in and through drawing may be an essential skill for the future As such the book counters recent declines in drawing instruction to propose five Paradigms for teaching drawing as design as seeing as experience and experiment as expression and as a visual language with exemplary curricula for pre K12 art and general education pre professional programs across the visual arts and continuing education With the aid of instructional examples this volume dispels the misconception of drawing as a talent reserved for the artistically gifted and posits it as a teachable skill that can be learned by all This text will be of primary interest to researchers scholars and doctoral students with interests in drawing theory and practice cognition in the arts positive psychology creativity theory as well as the philosophy and history of arts education Aligning with contemporary trends such as Design Thinking STEAM and Graphicacy the text will also have appeal to visual arts educators at all levels and other educators involved in arts integration
