Gupta,Quan Z. Sheng,2019-02-05 While Computer Security is a broader term which incorporates technologies protocols standards and policies to ensure the security of the computing systems including the computer hardware software and the information stored in it Cyber Security is a specific growing field to protect computer networks offline and online from unauthorized access botnets phishing scams etc Machine learning is a branch of Computer Science which enables computing machines to adopt new behaviors on the basis of observable and verifiable data and information It can be applied to ensure the security of the computers and the information by detecting anomalies using data mining and other such techniques This book will be an invaluable resource to understand the importance of machine learning and data mining in establishing computer and cyber security It emphasizes important security aspects associated with computer and cyber security along with the analysis of machine learning and data mining based solutions The book also highlights the future research domains in which these solutions can be applied Furthermore it caters to the needs of IT professionals researchers faculty members scientists graduate students research scholars and software developers who seek to carry out research and develop combating solutions in the area of cyber security using machine learning based approaches It is an extensive source of information for the readers belonging to the field of Computer Science and Engineering and Cyber Security professionals Key Features This book contains examples and illustrations to demonstrate the principles algorithms challenges and applications of machine learning and data mining for computer and cyber security It showcases important security aspects and current trends in the field It provides an insight of the future research directions in the field Contents of this book help to prepare the students for exercising better defense in terms of understanding the motivation of the attackers and how to deal with and mitigate the situation using machine learning based approaches in better manner **Intelligence of Things: Technologies and Applications** Nhu-Ngoc Dao,Quang-Dung Pham,Sungrae Cho,Ngoc Thanh

Nguyen,2024-12-23 This book aims to provide state of the art knowledge in the field of Intelligence of Things to both academic and industrial readers In particular undergraduate graduate and researchers may find valuable information to drive their future research This book is considered a reference for numerous courses such as Artificial Intelligence Internet of Things Intelligent Systems and Mobile Networks In the industrial area this book provides information on recent studies in applying AI to IoT developments which help to align and shorten R D processes to introduce new classes of intelligent IoT products **Pattern Detection and Discovery** David J Hand,Niall, M. Adams,Richard J. Bolton,2003-08-02 The collation of large electronic databases of scienti c and commercial infor tion has led to a dramatic growth of interest in methods for discovering struc res in such databases These methods often go under the general name of data mining One important subdiscipline within data mining is concerned with the identi cation and detection of anomalous interesting unusual or valuable cords or groups of records which we call patterns Familiar examples are the detection of fraud in credit card transactions of particular coincident purchases in supermarket transactions of important nucleotide sequences in gene sequence analysis and of characteristic traces in EEG records Tools for the detection of such patterns have been developed within the data mining community but also within other research communities typically without an awareness that the sic problem was common to many disciplines This is not unreasonable each of these disciplines has a large literature of its own and a literature which is growing rapidly Keeping up with any one of these is di cult enough let alone keeping up with others as well which may in any case be couched in an familiar technical language But of course this means that opportunities are being lost discoveries relating to the common problem made in one area are not transferred to the other area and breakthroughs and problem solutions are being rediscovered or not discovered for a long time meaning that e ort is being wasted and opportunities may be lost *Robotic Process Automation* Christian Czarnecki,Peter Fettke,2021-05-10 This book brings together experts from research and practice It includes the design of innovative Robot Process Automation RPA concepts the discussion of related research fields e g Artificial Intelligence AI the evaluation of existing software products and findings from real life implementation projects Similar to the substitution of physical work in manufacturing blue collar automation Robotic Process Automation tries to substitute intellectual work in office and administration processes with software robots white collar automation The starting point for the development of RPA was the observation that despite the use of process oriented enterprise systems such as ERP CRM and BPM systems additional manual activities are still indispensable today In the RPA approach these manual activities are learned and automated by software robots either by defining rules or by observing manual activities RPA is related to business process management machine learning and artificial intelligence Tools for RPA originated from dedicated stand alone software Today RPA functionalities are also integrated into elaborated process management suites From a conceptual perspective RPA can be structured into input components sensors in the wide sense an intelligence center and output components actuators in the wide sense From a

strategic perspective the impact of RPA can be related to the support of existing tasks the complete substitution of human activities and the innovation of processes as well as business models At present high expectations are related to the use of RPA in the improvement of software supported business processes Manual activities are learned and automated by software robots that interact with existing applications via the presentation layer In combination with artificial intelligence AI as well as innovative interfaces e g voice recognition RPA creates a novel level of automation for office and administration processes Its benefit potential reaches a return on investment ROI up to 800% that is documented in various case studies
