Thayer, 1998-07-08 Nuclear biological and chemical NBC weapons delivered covertly by terrorists or hostile governments pose a significant and growing threat to the United States and other countries Although the threat of NBC attack is widely recognized as a central national security issue most analysts have assumed that the primary danger is military use by states in war with traditional military means of delivery The threat of covert attack has been imprudently neglected Covert attack is hard to deter or prevent and NBC weapons suitable for covert attack are available to a growing range of states and groups hostile to the United States At the same time constraints on their use appear to be eroding This volume analyzes the nature and limits of the covert NBC threat and proposes a measured set of policy responses focused on improving intelligence and consequence management capabilities to reduce U S vulnerability About the authors Richard A Falkenrath is Assistant Professor of Public Policy at Harvard s Kennedy School of Government He served as Executive Director of the Belfer Center for Science and International Affairs BCSIA and before that as a Research Fellow He is the author and co author of *Shaping Europe s Military Order* 1995 *Avoiding Nuclear Anarchy* 1996 *America s Achilles Heel Nuclear Biological Chemical Terrorism and Covert Attack* 1998 and numerous journal articles and chapters of edited volumes Falkenrath has been a Visiting Research Fellow at the German Society of Foreign Affairs DGAP in Bonn He holds a PhD from the Department of War Studies King s College London where he was a British Marshall Scholar and is a summa cum laude graduate of Occidental College Los Angeles with degrees in economics and international relations He is on leave in 2001 2002 and is currently serving as Director for Counterproliferation and Homeland Defense at the National Security Council Bradley A Thayer is Assistant Professor of Political Science at the University of Minnesota Duluth

Chemical Warfare Edward M. Spiers,2016-04-30 Ever since its employment in the First World War chemical warfare has always aroused controversy Governments have responded by pursuing the policies of disarmament and deterrence in the hope of avoiding its recurrence However despite the signing of the Geneva Protocol in 1925 which banned the use of poison gas chemical weapons have been used in subsequent conflicts and most recently in the Gulf War between Iraq and Iran In this work the policies of disarmament and deterrence will be reassessed within a broad historical and strategic context It will be argued that poison gas could still be used in a modern European conflict that the Soviet forces are the best equipped to operate in a contaminated environment and that weaknesses persist in NATO s anti chemical defences and in her deterrent It will be emphasised too that the Geneva disarmament talks which have made some progress in recent years still face formidable difficulties over the issues of verification and compliance Above all it will be claimed that the onset of nuclear parity between

the superpowers has eroded the credibility of a deterrent to chemical attack based upon the threat of nuclear release Accordingly this book will contend that the United States should modernize her stockpile of chemical weapons to bolster the Western deterrent and to provide more leverage for the negotiations in Geneva The 1980 Guide to the Evaluation of Educational Experiences in the Armed Services: Coast Guard, Marine Corps, Navy, Dept. of Defense American Council on Education,1980 **Military Occupational Specialties Manual (MOS Manual)** United States.
