Nuclear Structures:

Nuclear Structures A. J. MacGillivray, G. D. Birnie, 2013-10-22 Nuclear Structures Isolation and Characterization focuses on techniques for the isolation of molecular and macromolecular components of cell nuclei The book first discusses nuclear matrices including isolation of nuclear matrices and notes on the method The text examines nucleoids Nucleoid preparation and morphology characterization of nucleoids experimental uses of nucleoids and criticism of nucleoid preparation are underscored The book also discusses nuclear envelopes polynucleosomes and monomer nucleosomes and metaphase chromosomes The text also examines DNA tight binding proteins including the definition and preparation of DNA tight binding proteins immunological characterization of tight binding proteins and DNA binding characteristics The book also examines nucleoli and preribosomal ribonucleoprotein particles Methods for the isolation of nucleoli assessment of nucleolar preparations and isolation of preribosomal ribonucleoprotein particles are discussed The text also covers ribonucleoprotein particles containing heterogeneous nuclear RNA and nuclear RNP particles containing small RNAs The selection is a good reference for readers wanting to study the isolation of molecular and macromolecular components of cell nuclei

Nuclear Structure and Function Miguel Berrios, 1998 This volume is a comprehensive guide to the methodologies used in the study of structural domains of cell nuclei The text covers chromatin the karyoskeleton the soluble domain and the nucleolus It details methods that are used to isolate components from these domains and techniques used to assemble and disassemble nuclear elements There is also coverage of three dimensional mapping and localization of nuclear processes Key Features Provides a practical laboratory guide for studying cell nuclei Includes comprehensive and easy to follow protocols

The Compound Model of Nuclear Structures Nigel Anton Cunningham, 2012-11-06 The objective of this theoretical approach to understanding the structure of the nucleus was to produce a concise model for all the elements In particular the focus was to determine a few simple rules that would define the precise structure of every stable isotope After several years of research and analysis a concise model of just three rules has been achieved This model has exact correlations with the current experimental data for all the stable isotopes

Aspects of Nuclear Structure and Function K Leon, 1974-01-01 Aspects of Nuclear Structure and Function deals with various aspects of nuclear structure and function and covers topics ranging from the ultrastructure of the female gamete to the structure biochemistry and functions of the nuclear envelope Banding patterns in chromosomes histones and nonhistone proteins and the transfer of genetic information in polytene cells are also discussed This book is comprised of six chapters and begins by presenting a comparative view of some aspects of the ultrastructure of the vegetative growth aspects of oogenesis with emphasis on microtubules intercellular bridges of differentiating oocytes and vitellogenesis as well as accessory structures of the egg envelope The following chapters explore the structure biochemistry and functions of the nuclear envelope banding patterns in chromosomes chromosomal proteins histones and nonhistone proteins transfer of genetic information in polytene cells and the intracellular biology of DNA

polymerases in eukaryotic cells their association with the nucleus and how this association changes during the mitotic cell cycle The relationship between eukaryotic DNA polymerases and DNA replication is also examined This monograph should be a valuable resource for biochemists *Annual Plant Reviews, Plant Nuclear Structure, Genome Architecture and Gene Regulation* David Evans, Katja Graumann, John A. Bryant, 2013-03-27 This timely volume brings together expert reviews of the recent significant advances in our knowledge and understanding of the organisation of the higher plant nucleus and in particular in the relationship between nuclear organisation and the regulation of gene expression Rapid progress has been made in a number of key areas over the last five years including description and characterization of proteins of the nuclear envelope and nuclear pore complex novel insights into nucleoskeletal structures as well as developments related to chromatin organization function and gene expression These advances open the way for new research into areas such as stress tolerance plant pathogen interactions and ultimately crop improvement and food security Continued research into plant nuclear structure genome architecture and gene regulation also enriches our understanding of the origin and evolution of the nucleus and its envelope Edited by world class researchers in plant cell biology and comprising contributions from internationally renowned academics this latest volume in the prestigious Annual Plant Reviews series brings together a wealth of knowledge in the burgeoning field of plant nuclear structure and genetics Annual Plant Reviews Volume 46 Plant Nuclear Structure Genome Architecture and Gene Regulation is a vital resource for advanced students researchers and professionals in plant science and related disciplines Libraries in all research establishments where plant science biochemistry molecular biology genetics and genomics and agricultural science are taught and studied will find this excellent volume an essential addition to their shelf **RNA Trafficking and Nuclear Structure Dynamics** Philippe

Jeanteur, 2007-11-03 This volume explores nuclear structure and trafficking involving or relevant to RNA and RNPs Topics include advances and current problems in the structural organization of different subnuclear compartments Cajal bodies and gems speckles containing splicing factors and PML bodies characteristic of ProMyelocytic leukemia The book also describes the dynamic aspects of RNA trafficking and the latest technologies for live cell imaging of mRNA Nuclear Structure and Gene Expression R. Curtis Bird, Wilfred D. Stein, Jane B. Lian, Janet L. Stein, 1996-11-28 Nuclear Structure and Gene Expression assimilates the contributions of genome organization and of the components of the nuclear matrix to the control of DNA and RNA synthesis Nuclear domains which accommodate DNA replication and gene expression are considered in relation to short term developmental and homeostatic requirements as well as to long term commitments to phenotypic gene expression in differentiated cells Consideration is given to the involvement of nuclear structure in gene localization as well as to the targeting and concentration of transcription factors Aberrations in nuclear architecture associated with and potentially functionally related to pathologies are evaluated Tumor cells are described from the perspective of the striking modifications in both the composition and organization of nuclear components Nuclear Structure and Gene Expression presents concepts

as well as experimental approaches which define functionality of nuclear morphology Mechanisms of interaction between nuclear structure and genes Gene expression regulation by elements of the nuclear matrix How nuclear structure exerts a regulatory effect on other aspects of cell function physiology

Nuclear Structure K. Abrahams, K. Allaart, A. E. L. Dieperink, 2013-03-08 After the success of the previous summer schools organized by the Nuclear Physics Division of the Netherlands Physical Society in 1975 and 1977 we thought it worthwhile to continue this tradition The immediate very positive reactions received from all invited speakers encouraged us to proceed with the organization Although the number of students had to be restricted to about one hundred the international character of the School was evident from about thirty nationalities which were represented The material contained in this book covers the talks given by all speakers invited to lecture on the subject of nuclear structure research These proceedings should therefore serve as an excellent introduction to many topics of current interest in this exciting field We hope that the lectures and discussions as well as the many informal contacts made during the various social activities will greatly stimulate interest in nuclear structure investigations among all the participants The organization of the summer school has been made possible by substantial support given by the Scientific Affairs Division of the North Atlantic Treaty Organization the Netherlands Ministry of Education and Science and the Netherlands Physical Society The invaluable help of the Bureau Congressen of the Ministry of Education and Science and the friendly assistance of the management of the College of Agriculture in Dronten contributed greatly to the pleasant atmosphere during the summer school

Nuclear Structure In China 2010 - Proceedings Of The 13th National Conference On Nuclear Structure In China Hong-bo Bai, Jie Meng, En-guang Zhao, Shan-gui Zhou, 2011-08-15 This volume is a collection of the contributions to the 13th National Conference on Nuclear Structure in China NSC2010 It provides an important updated resource in the nuclear physics literature for researchers and graduate students studying nuclear structure and related topics Recent progress made in the study of exotic nuclear structure the structure and synthesis mechanism of superheavy nuclei nuclear astrophysics and the development of quantum many body approaches are covered

Nuclear Structure from a Simple Perspective R. F. Casten, 1990-04-26 This book provides a useful survey and assessment of the study of low energy collective and single particle excitations of medium and heavy nuclei An ideal resource for graduate students the book covers both experimental and theoretical perspectives The author's simple intuitive approach will help the reader to understand the empirical systematics as well as detailed model calculations without recourse to complex and often confusing formalism

[Nuclear Structure Study with Neutrons](#) J. Ero, 2012-12-06 The International Conference on Nuclear Structure Study with Neutrons organized in Budapest between 31st July and 5th August 1972 was the successor of

a meeting held seven years ago in Antwerp The close links between the two conferences were revealed not in name alone but more importantly in the choice of subjects discussed As in Antwerp the lectures and contributions to the Budapest Conference could be grouped under the following five main headings nuclear spectroscopy the optical model the statistical model and intermediate structures the mechanism of neutron capture and non statistical effects and finally miscellaneous special topics The invited papers on the one hand summarizing recent developments and current thinking in one of the above main topics and the other surveying the most important results of the contributed papers submitted to the Conference were presented on the plenary sessions Most of the contributed papers were read in full on three parallel sessions This volume contains the complete text of all the lectures delivered in the plenary sessions and abstracts of the contributed papers The invited talks were presented at the Conference in a rather random order because of technical reasons it seemed however more sensible to change their order according to their subjects and to print them grouped under the above main headings Further more we divided the Proceedings into two main parts the first containing only the lectures of summarizing character the second including the abstracts of the contributions together with the surveying talks
