Planetary Aeronomy:

Planetary Aeronomy Siegfried Bauer, Helmut Lammer, 2004-07-05 Planetary Aeronomy is a modern and concise introduction to the underlying physical and chemical processes that govern the formation and evolution of the upper atmospheres of planets. The general approach employed permits consideration of the growing number of extrasolar planets the detailed observation of which will become possible over the next decades. The book explains the physics behind many atmospheric processes which are relevant for the evolution of planetary atmospheres and their water inventories and also contains useful scaling laws and analytical expressions that can be applied to any planet. Readers thus gain insight into the evolution of terrestrial planets and their long time habitability, atmospheric stability etc. This volume can be used both as a graduate textbook for students wishing to specialize in the field as well as a succinct compendium for researchers in the field.

Planetary Atmospheres, 1965 Comparative Aeronomy Andrew F. Nagy, A. Balogh, Thomas E. Cravens, Michael Mendillo, Ingo Müller-Wodarg, 2008-12-31 Andrew F. Nagy Originally published in the journal Space Science Reviews Volume 139 Nos 1-4 DOI 10.1007/s11214-008-9353-0 Springer Science Business Media B.V. 2008 Keywords Aeronomy The term aeronomy has been used widely for many decades but its origin has mostly been lost over the years. It was introduced by Sydney Chapman in a Letter to the Editor entitled Some Thoughts on Nomenclature in Nature in 1946. Chapman 1946 In that letter he suggested that aeronomy should replace meteorology writing that the word meteor is now irrelevant and misleading. This proposal was apparently not received with much support so in a short note in Weather in 1953 Chapman 1953 wrote If despite its obvious convenience of brevity in itself and its derivatives it does not commend itself to aeronomers I think there is a case for modifying my proposal so that instead of the word being used to signify the study of the atmosphere in general it should be adopted with the restricted sense of the science of the upper atmosphere for which there is no convenient short word. In a chapter he wrote in a 1960 book Chapman 1960 he gave his final and definitive definition by stating that Aeronomy is the science of the upper region of the atmosphere where dissociation and ionization are important. The Workshop on Comparative Aeronomy was held at ISSI during the week of June 25-29 2007 **Scientific and Technical Aerospace Reports**, 1967 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database **NASA Technical Memorandum**, 1992 **Keywords Index to U.S. Government Technical Reports** United States.
