Planetary And Protoplanetary Nebulae From Iras To Iso:

Planetary and Proto-Planetary Nebulae: From IRAS to ISO Andrea Preite Martinez, 2012-12-06 There are two questions that we can ask ourselves in order to describe this workshop The first question is a double question why a conference on this subject and why a workshop The first idea of organizing this workshop came while reading the scientific objectives of one of the instruments onboard the ISO satellite a phase A document concerning the IR camera On going through the scientific motivations for building the instrument I realized with surprise that no mention was made of Planetary Nebulae PN At present this is no longer true There is a chapter indicating the capabilities of the camera in the PN field and what we can reasonably expect from that instrument But it was at this moment that the first idea of organizing a workshop on the subject of PN came Of course there are other stronger motivations The first one is that I think this is the right moment after IRAS I think we all spent the last two or three years working on IRAS data IRAS represented a corner stone for those working on Planetary Nebulae the amount of data that came out of the instruments onboard the satellite was enormous and opened up new ways of looking at planetary nebulae as well as at other fields

Planetary Nebulae Silvia Torres-Peimbert, 2012-12-06 Every 5 years since 1967 a meeting has been held to discuss the subject of planetary nebulae and their central stars Previous meetings have been held in Tatranska Lomnica Czechoslovakia Liege Belgium Ithaca New York U S A and London Great Britain IAU Symposium 131 was sponsored by IAU Commission 34 on Interstellar Matter and co sponsored by IAU Commissions 35 and 36 on Stellar Constitution and Theory of Stellar Atmospheres The symposium was held at the Universidad Nacional Autonoma de Mexico in Mexico City October 5-9 1987 It took place in one of the old buildings of the University of Mexico in the downtown area The inner patio of the building provided very pleasant surroundings for the poster sessions and for extensive discussions among the participants The meeting was attended by 160 scientists from 22 countries The Scientific Organizing Committee under the chairmanship of J B Kaler prepared a comprehensive scientific program based on a set of invited presentations All contributed papers were presented in poster form The Scientific Organizing Committee would like to thank the staff of the University of Illinois Department of Astronomy Dr Ron Allen for granting financial support Carol Stickrod Louise Browning Deana Griffin and Sandie Osterbur for their help with the organization IAU provided economic assistance to a group of young astronomers

Planetary and Proto-Planetary Nebulae: From IRAS to ISO Andrea Preite Martinez, 1987-06-30 There are two questions that we can ask ourselves in order to describe this workshop The first question is a double question why a conference on this subject and why a workshop The first idea of organizing this workshop came while reading the scientific objectives of one of the instruments onboard the ISO satellite a phase A document concerning the IR camera On going through the scientific motivations for building the instrument I realized with surprise that no mention was made of Planetary Nebulae PN At present this is no longer true There is a chapter indicating the capabilities of the camera in the PN field and what we can reasonably expect from that instrument But it was at this

moment that the first idea of organizing a workshop on the subject of PN came Of course there are other stronger motivations The first one is that I think this is the right moment after IRAS I think we all spent the last two or three years working on IRAS data IRAS represented a corner stone for those working on Planetary Nebulae the amount of data that came out of the instruments onboard the satellite was enormous and opened up new ways of looking at planetary nebulae as well as at other fields

Planetary Nebulae Harm J. Habing, Henny J.G.L.M. Lamers, 2012-12-06 Planetary nebulae present a fascinating range of shapes and morphologies They are ideal laboratories for the study of different astrophysical processes atomic physics radiative transfer stellar winds shocks wind wind interaction and the interaction between stellar winds and the interstellar medium In addition planetary nebulae provide information about the late stages of stellar evolution In the last five years studies of planetary nebulae have progressed very rapidly and new phenomena and insights have been gained This is partly due to new observations e.g. from the Hubble Space Telescope the ISO satellite and new infrared and millimeter spectrographs and partly to the advancement of hydrodynamic simulations of the structures of planetary nebulae PN Many of these new results were reported at IAU Symposium 180 in Groningen the Netherlands on August 26 to 30 1996 This symposium was dedicated to one of the pioneers of PN research Stuart Pottasch These proceedings contain chapters on Introduction to PN with the basic parameters Distances of PN The central stars of PN The envelopes of PN The evolution from AGB to PN The evolution from PN to white dwarfs PN in the galactic context PN in extragalactic systems The future of

PN research The book contains 29 reviews and more than 200 shorter contributions **Planetary Nebulae** R. Weinberger, A. Acker, 2012-12-06 Planetary nebulae are a keystone for the understanding of the evolution of stars for deep insights into the physical processes prevailing in highly excited dilute nebulae and for the chemical evolution in galaxies These objects displaying an intriguing morphology have a short lifetime of a few tens of thousands of years and have become one of the best studied classes of celestial sources However despite large and successful efforts from both the observational and theoretical side planetary nebulae still keep some of their secrets like the widely unknown distances and will undoubtedly also be objects of thorough investigations in the years to come *Planetary Nebulae in Our Galaxy and Beyond (IAU S234)* International Astronomical Union. Symposium, 2006 IAU S234 summarises current research on planetary nebulae in reviews by leading experts in the field **Infrared Astronomy with ISO** Thérèse Encrenaz, Martin Francis Kessler, Centre de physique des Houches, 1992 Infrared Astronomy with ISO **The Infrared Spectral Region of Stars** Carlos Jaschek, Y. Andrillat, 1991-09-19 This book provides a review of the work in progress on the infrared spectral region of stars The most important previous mission the Infrared Astronomy Satellite IRAS was launched in 1983 Although it was only operating for one year in that time it surveyed the whole sky for infrared emitters of many different kinds providing a fundamental catalogue of thousands of objects As a consequence of its success a new mission to observe the infrared sky is being planned The Infrared Space Observatory ISO is scheduled for a launch in May 1993 It should add substantially to our knowledge of the stars The volume is based on the proceedings of an international conference held in Montpellier France It provided an excellent forum for the experts in the field to get together and evaluate the status of current knowledge and analyse the instrumentation Commemorating the Past and Looking Towards the Future Ngee-pong Chang, Hon Ming Lai, Cheuk-Yin Wong, 2002 OCPA 2000 provided a forum for researchers from the various subfields of physics to broaden their knowledge horizons It promoted friendship among ethnic Chinese physicists from all the continents and fostered a sense of belonging to a community with a strong tradition of scholarship and heritage Ethnic Chinese physicists gathered to review past accomplishments and to consider making further contributions to the world of physics **The Strasbourg-ESO Catalogue of Galactic Planetary Nebulae** Agnès Acker, 1992 **CO: Twenty-Five Years of Millimeter-Wave Spectroscopy** William B. Latter, Simon J.E. Radford, Philip R. Jewell, Jeffrey G. Mangum, John Bally, 2013-12-01 Interstellar carbon monoxide CO was first detected in 1970 with the 36 foot diameter telescope of the National Radio Astronomy Observatory on Kitt Peak in Southern Arizona R W Wilson K B Jefferts and A A Penzias of Bell Labs reported We have found intense 2.6 mm line radiation from nine Galactic sources which we attribute to carbon monoxide Soon afterward several other basic molecules were also observed in space IAU Symposium 170 CO Twenty Five Years of Millimeter Wave Spectroscopy was organized to commemorate those discoveries The Symposium reviewed the accomplishments of a quarter century of research on interstellar molecular gas surveyed the current state of millimeter wave spectroscopy and gave a

glimpse of what the next 25 years might hold Studies of interstellar CO have revolutionized our understanding of the phases and dynamics of the interstellar medium the initial and final stages of stellar evolution the chemistry of dense and diffuse interstellar matter and of the solar system the structure of the Milky Way galaxy and the content and structure of other galaxies some very distant Spectroscopic studies of CO and other molecules are primary tools for investigating all these topics which are among the most fundamental and active research areas in astrophysics New developments in instrumentation including several powerful new telescopes continue to keep millimeter and submillimeter wavelength radio astronomy at the forefront of research Organic Matter in Space (IAU S251) International Astronomical Union.

Symposium,2008 Our knowledge of the origin evolution nature and distribution of organic matter in space has undergone a revolution in recent years Insights into various aspects of this material can be found using a variety of different technical approaches These range from telescopic measurements by observational astronomers over a wide range of wavelengths to laboratory experiments and simulations by chemists physicists and spectroscopists and analyses of actual extraterrestrial materials IAU Symposium 251 brought together expertise of scientists from different disciplines including observational astronomers laboratory spectroscopists and solar system scientists to provide a synthesis of our current understanding of these organics and to identify areas in which additional work and new ideas are required to further our understanding

The Stellar Populations of Galaxies B. Barbuy,Alvio Renzini,2012-12-06 One approach to learning about stellar populations is to study them at three different levels of resolution First in our own Galaxy secondly from nearby galaxies where stars can still be resolved and thirdly in remote galaxies in which the stellar population can only be studied in integrated light This IAU Symposium covered the entire range of galaxies in its study of their stellar populations Interspersed with theoretical papers the wealth of observational results provides an important state of the art presentation of the progress that has been made in this field **Post-AGB Objects as a Phase of Stellar Evolution** R. Szczerba,S.K. Górny,2013-03-09

The term proto planetary nebulae PPNe in the context of the late stages of stellar evolution was created only slightly more than 20 years ago to express the belief that in the near future these objects will become planetary nebulae PNe The first proto planetary nebulae called also post Asymptotic Giant Branch or shortly post AGB objects AFGL 2688 and AFGL 618 were discovered in mid seventies in course of the Air Force Sky Survey Investigation of this phase of stellar evolution developed very rapidly in 1980 s after the IRAS mission when it became clear that proto planetary nebulae emit a significant part of their energy in the mid and far infrared Hundreds of new candidates have been proposed but the recognition of the real proto planetary nebulae is not a simple task and needs a substantial effort to exclude cases that represent different evolutionary stages High resolution spectroscopy of stellar atmospheres is of much importance in this respect Surprisingly only a small group of central stars the so called 21 11m emitters show chemical signatures of the 3 rd dredge up process Very recently a more detailed studies of mid infrared spectra from the Infrared Space Observatory ISO allow for a better

understanding of chemical composition and evolution of circumstellar material around these stars A new impetus in the field of proto planetary nebulae research was started in the 1990 s with high spatial resolution imaging in mid infrared and optical wavelength ranges Technology for Large Space Systems ,1989 Technology for Large Space Systems: A Bibliography with Indexes (supplement 20) United States.
