## Planetary Observations:

**Reduction of the Observations of Planets** Royal Observatory, Greenwich, 1845      *Reduction of the observations of Planets made at the Royal observatory, Greenwich from 1750 to 1830 ... computed under the superintendancy of G. Biddell Airy*, 1845      **First International Conference on Laboratory Research for Planetary Atmospheres** Kenneth Fox, 1990

Astronomical Observations Made at the Honorable the East India Company's Observatory at Madras in the Years 1843-1847 Thomas Glanville Taylor, Madras Observatory (India), 1848      *Vision and Voyages for Planetary Science in the Decade 2013-2022* National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Planetary Science Decadal Survey, 2012-01-30

In recent years planetary science has seen a tremendous growth in new knowledge. Deposits of water ice exist at the Moon's poles. Discoveries on the surface of Mars point to an early warm wet climate and perhaps conditions under which life could have emerged. Liquid methane rain falls on Saturn's moon Titan creating rivers, lakes and geologic landscapes with uncanny resemblances to Earth's. *Vision and Voyages for Planetary Science in the Decade 2013-2022* surveys the current state of knowledge of the solar system and recommends a suite of planetary science flagship missions for the decade 2013-2022 that could provide a steady stream of important new discoveries about the solar system. Research priorities defined in the report were selected through a rigorous review that included input from five expert panels. NASA's highest priority large mission should be the Mars Astrobiology Explorer-Cacher (MAX-C), a mission to Mars that could help determine whether the planet ever supported life and could also help answer questions about its geologic and climatic history. Other projects should include a mission to Jupiter's icy moon Europa and its subsurface ocean and the Uranus Orbiter and Probe mission to investigate that planet's interior structure, atmosphere and composition. For medium size missions *Vision and Voyages for Planetary Science in the Decade 2013-2022* recommends that NASA select two new missions to be included in its New Frontiers program which explores the solar system with frequent mid-size spacecraft missions. If NASA cannot stay within budget for any of these proposed flagship projects it should focus on smaller, less expensive missions. First *Vision and Voyages for Planetary Science in the Decade 2013-2022* suggests that the National Science Foundation expand its funding for existing laboratories and establish new facilities as needed. It also recommends that the program enlist the participation of international partners. This report is a vital resource for government agencies supporting space science, the planetary science community and the public.

*Preserving Scientific Data on Our Physical Universe* National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Steering Committee for the Study on the Long-Term Retention of Selected Scientific and Technical Records of the Federal Government, 1995-04-19. This book advises the National Archives and Records Administration and federal R & D agencies on the long-term retention of scientific and technical data, particularly in electronic formats. It proposes the creation of a National Scientific Information Resource Federation which would apply a strategic data

life cycle management plan to better link the government's existing scientific data holdings and improve public access to those holdings. The book is expected to draw attention to data management concerns in the context of the current government emphasis on promoting a National Information Infrastructure and to make a significant contribution to improving the inadequate situation regarding our nation's valuable scientific data and information resources.

,1910 Hellenistic Astronomy Alan C. Bowen, Francesca Rochberg, 2020-02-17 In Hellenistic Astronomy The Science in Its Contexts new essays by renowned scholars address questions about what the ancient science of the heavens was in the ancient Near East and Mediterranean worlds and the numerous contexts in which it was pursued Together these essays will enable readers not only to understand the technical accomplishments of this ancient science but also to appreciate their historical significance by locating the questions challenges and issues inspiring them in their political medical philosophical literary and religious contexts Winner of the 2020 Choice Outstanding Academic Title Award Catalog of Lunar Mission Data National Space Science Data Center, 1977 The Astronomy of Levi ben Gerson (1288-1344) Bernard R. Goldstein, 2012-12-06 It would seem that S Munk was the first modern scholar to draw attention to the significance of Levi ben Gerson's Astronomy surely the most original work on astronomy written in Hebrew in the Middle Ages Munk 1859 p 500 called for a specialist to undertake a serious study of this work but there was little response to his plea in the succeeding century Indeed this is the first edition of the Hebrew text of any part of Levi's Astronomy but for the table of contents Renan 1893 pp 624-32 and the poems celebrating the invention of the Jacob Staff that appear in chapter 9 Carlebach 1910a pp 152-53 The text of Levi's Astronomy is written in a ponderous Hebrew style but the content sparkles with originality The Ptolemaic tradition is subjected to a profound critique based on the idea that the planetary models must conform both to Levi's own observations as well as those of the ancients and the claim that astronomical theory must be philosophically sound The enduring vigor of the Ptolemaic tradition has been characterized by O Neugebauer as follows There is no better way to convince oneself of the inner coherence of ancient and medieval astronomy than to place side by side the Almagest al-Battani's Opus astronomicum and Copernicus's De Revolutionibus Chapter by chapter theorem by theorem table by table these works run parallel 1957 pp 205-6 *Handbook of Practical Astronomy* Günter D.
