and malaria often appear in parallel with growing non communicable diseases including heart disease and diabetes and yet resources are often less than the levels recommended by the World Health Organisation for basic health care The new edition of this well respected text explains the importance of health planning in both developing regions such as Africa and those in transition such as Central and Eastern Europe It stresses the importance of understanding the national and international context in which planning occurs and provides an up to date analysis of the major current policy issues including health reforms Separate chapters are dedicated to the distinct issues of finance for health care and human resource planning The various techniques used at each stage of the planning process are explained starting with the situational analysis and then looking in turn at priority setting option appraisal programming implementation monitoring and evaluation The book ends by examining the challenges facing planners in the 21st century particularly in the light of growing globalisation A major theme of the book is the need to recognise and reconcile the inevitable tension that lies between value judgements and rational decision making As such in addition to introducing techniques such as costing and economic appraisal it also outlines techniques such as stakeholder analysis for understanding the relative attitudes and power of different groups in planning decisions Each chapter includes a comprehensive bibliography including key websites a summary and exercises to help the reader practise techniques and better understand the content The book argues that all health professionals and community groups should be involved in the planning process for it to be effective and will therefore appeal to anyone involved in planning
