Plant Genetic Resources Of Ethiopia:

Plant Genetic Resources of Ethiopia Jan Engels, J. G. Hawkes, M. Worede, 1991-03-21 One of the world centers of crop evolution and origin Ethiopia has long been recognized as an important area of diversity for several major and various minor crops Based on an international conference held in Addis Ababa this book describes how plant genetic diversity in Ethiopia is of vital importance in breeding new varieties of crops with desirable characteristics such as increased resistance to pests and diseases and greater adaptation to heat and drought The three main sections in the book consider the Ethiopian center of diversity germ plasm or genetic material collection and conservation in Ethiopia and the evaluation and utilization of Ethiopian genetic resources A broad range of food and feed crops and plants of medicinal and industrial importance are discussed both at a national and international level A brief account of conservation strategies and gene bank problems unique to Ethiopia is also given The importance of Ethiopia's plant genetic resources to world agriculture has been demonstrated on more than one occasion Plant breeders geneticists and botanists throughout the world will therefore find this unique book a valuable source of information and an essential reference work *Plant Genetic Resources in Ethiopia*

placing greater demands on food related requirements in terms of quantity quality and diversity The Green Revolution which significantly enhanced productivity of important food crops nevertheless resulted in certain fallouts as genetic erosion soil degradation chemical pollution and aquifer depletion Amongst these decrease in plant genetic diversity is an irreversible loss As the basic raw material for future plant breeding plant genetic resources of foodgrains are the key to future food security Though plant breeding has attracted the attention of many authors plant genetic resources remain somewhat neglected This book gives an overall perspective current status of genetic resource of important foodgrain crops wheat rice maize barley sorghum millets pulses and legumes and underutilized crops It provides a comprehensive compilation on current status of information on origin taxonomy diversity collection exchange evaluation utilization molecular characterization and conservation for food grain crops Eminent scientists and crop specialists have critically analyzed the information in view of the present and future research priorities In addition management issue related to plant genetic resources are also discussed At present such information on these crops is lacking and this book fills in the void It shall serve as reference for genetic resource managers researchers teachers students and policy makers in biology and agriculture **Promoting the Conservation and Use of Plant Genetic Resources by Training and Research** Peter M. A. Tigerstedt,2002

Community Biodiversity Management Walter de Boef,2013 This book is the first to set out a clear overview of CBM as a methodology for meeting socio environmental changes Plant Genetic Resources Newsletter ,1995 The Ex Situ Conservation of Plant Genetic Resources J.G. Hawkes,Nigel Maxted,B.V. Ford-Lloyd,2012-12-06 It is a distressing truism that the human race during the last millennium has caused the exponential loss of plant genetic diversity throughout the world This has had direct and negative economic political and social consequences for the human race which at the same time has failed to exploit fully the positive benefits that might result from conserving and exploiting the world s plant genetic resources However a strong movement to halt this loss of plant diversity and enhance its utilisation for the benefit of all humanity has been underway since the 1960 s Frankel and Bennett 1970 Frankel and Hawkes 1975 This initiative was taken up by the Convention on Biological Diversity CBD 1992 that not only expounds the need to conserve biological diversity but links conservation to exploitation and development for the benefit of all Article 8 of the Convention clearly states the need to develop more effective and efficient guidelines to conserve biological diversity while Article 9 along with the FAO International Undertaking on Plant Genetic Resources promotes the adoption of a complementary approach to conservation that incorporates both ex situ and in situ techniques **Biodiversity and Conservation of Plant Genetic Resources in Asia** Young Goo Park,Sadao Sakamoto,1996 Plant Genetic Resources of Legumes in the Mediterranean Nigel Maxted,Sarita Jane Bennett,2013-03-14 Genetic erosion that is the loss of native plant and genetic diversity has been exponential from the Mediterranean Basin through the Twentieth century This careless eradication of species and genetic diversity as a result of human activities from a hot spot of diversity threatens sustainable agriculture and food security for

the temperate regions of the world Since the early 1900s there has been a largely ad hoc movement to halt the loss of plant diversity and enhance its utilisation The Convention on Biological Diversity and Food and Agriculture Organisation of the United Nations International Undertaking on Plant Genetic Resources both highlight the need to improve conservation methodologies and enhance utilisation techniques It has been argued that the most important component of biodiversity is the genetic diversity of crop and forage species used to feed humans and livestock These cultivated and related wild species provides the raw material for further selection and improvement Leguminosae species are of major economic importance peas chickpeas lentils and faba beans as well as numerous forage species and provide a particularly rich source of protein for human and animal foods Their distribution is concentrated in the Mediterranean region and therefore the improvement of their conservation and use in the region is critical This text is designed to help ensure an adequate breadth of legume diversity is conserved and to help maximise the use of that conserved diversity The subjects of conservation and use of legume diversity the Mediterranean ecosystem and taxonomy of legumes are introduced Generic reviews of the taxonomy centre of diversity ecogeographic distribution genetic diversity distribution conservation status conservation gaps and future research needs are provided along with a discussion of the importance of rhizobia to the maintenance of legume diversity Current ex situ and in situ conservation activities as well current legume uses are reviewed In conclusion future priorities for ex situ and in situ plant genetic conservation and use of Mediterranean legumes are highlighted All contributors look forward rather than simply reviewing past and current activities and therefore it is hoped that the identification of genetic erosion location of taxonomic and genetic diversity and promotion of more efficient utilisation of conserved material will be enhanced

Proceedings of an International Workshop, 2004 Protecting Biological Diversity Carmen Richerzhagen, 2013-04-15 During the last ten years the enormous global loss of biodiversity has received remarkable attention Among the numerous approaches undertaken to stop or lessen this process access and benefit sharing ABS a market based approach has emerged as among the most prominent In theory ABS turns biodiversity and genetic resources from an open access good to a private good and creates a market for genetic resources It internalizes the resources positive externalities by pricing the commercial values for research and development and makes users pay for it Users benefits are shared with the resource holders and set incentives for the sustainable use and the conservation of biodiversity Carmen Richerzhagen however finds that in practice there are significant questions about the effectiveness of the approach in the protection of biodiversity and about the fair and equitable sharing of benefits arising from the

commercialization Utilizing the empirical findings of three case studies of biodiversity providing countries Costa Rica the Philippines and Ethiopia and one case study of a community of user countries the European Union EU Richerzhagen examines the effectiveness of ABS through the realization of its own objectives
