Plant pathology is the study of diseases in plants that are caused by pathogens It encompasses the studies of pathogen identification disease etiology plant disease epidemiology economic impact etc Pathogens that cause diseases in plants are fungi viruses bacteria protozoa etc Effector proteins cell wall degrading enzymes and toxins are the prominent methods of pathogenic infection Some of the severe plant diseases include citrus canker rice blast soybean cyst nematode etc This book discusses the fundamentals as well as modern approaches of plant pathology It strives to provide a fair idea about this discipline and to help develop a better understanding of the latest advances within this field particularly with respect to disease detection and identification Students researchers experts and all associated with botany and agriculture science will benefit alike from this book

Molecular Plant Pathology Matthew Dickinson,2004-06-02

Studies of the interactions between plants and their viral bacterial and fungal pathogens are of major importance in plant and crop production More than 10% of potential agricultural yield is lost to these organisms annually worldwide and major epidemics can cause significant local economic and environmental damage Molecular Plant Pathology addresses the underlying molecular principles of plant pathogen interactions in a readily accessible textbook format

Physiological Plant Pathology R. Heitefuß, P.H.

Williams, 2012-12-06 Plant pathology embraces all aspects of biological and scientific activity which are concerned with understanding the complex phenomena of diseases in plants Physiological plant pathology represents those specialities within plant pathology which focus on the physiological and biochemical activities of pathogens and on the response of host plant tissues Today there is an increasing recognition on the part of the scientific agricultural community that only through a deeper and more fundamental understanding of all the interacting components of the agricultural biota can we expect to improve our capabilities of feeding an expanding world population It is in this context that physiological plant pathology has assumed new significance within the broader field of plant pathology No longer are studies on the biochemistry and physiology of pathogens and pathogenesis merely isolated academic exercises rather a substantial coherent body of knowledge is accumulating upon which our understanding of the process of disease development and host resistance is being founded It is from these foundations of knowledge that ultimately new insights into the control of plant diseases may be expected to grow It seems appropriate therefore that at regular intervals those involved in the various subspecialities encompassing the broadest aspects of physiological plant pathology reassess the contributions within the particular specialities in the light of new knowledge and technologies for the purpose of articulating new and productive directions for the future
