**Plant Developmental Biology - Biotechnological Perspectives** Eng Chong Pua, Michael R. Davey, 2009-10-29 Many exciting discoveries in recent decades have contributed new knowledge to our understanding of the mechanisms that regulate various stages of plant growth and development Such information coupled with advances in cell and molecular biology is fundamental to crop improvement using biotechnological approaches Two volumes constitute the present work The first comprising 22 chapters commences with introductions relating to gene regulatory models for plant development and crop improvement particularly the use of Arabidopsis as a model plant These chapters are followed by specific topics that focus on different developmental aspects associated with vegetative and reproductive phases of the life cycle of a plant Six chapters discuss vegetative growth and development Their contents consider topics such as shoot branching bud dormancy and

growth the development of roots nodules and tubers and senescence The reproductive phase of plant development is in 14 chapters that present topics such as floral organ initiation and the regulation of flowering the development of male and female gametes pollen germination and tube growth fertilization fruit development and ripening seed development dormancy germination and apomixis Male sterility and self incompatibility are also discussed *Plant Tissue Culture, Development, and Biotechnology* Robert N. *Phytosfere'99 - Highlights in European Plant Biotechnology Research and Technology Transfer* G.E. de Vries, K. Metzlauff, 2000-11-07 Humans face the challenge of producing enough food to meet the demands imposed by economic biological and agricultural factors rising population rising income and an expectation of higher quality food and a more diverse diet decreasing amount of land available for food production lowering environmental impact of agricultural practices and preserving biodiversity Biotechnology is one of the most exciting and dynamic industries of our day It offers us the possibility of reducing our dependence on intensive farming Plant biotechnology is central to the search for effective environmentally safe and economically sound alternatives to the use of chemical pesticides and the exhaustion of natural resources Today applied plant science has four overall goals increased crop yield improved crop quality reducing production costs and reducing negative environmental impact Biotechnology is proving its value in meeting these

goals It offers farmers higher yielding crops with lower costs of production and new outlets such as nutraceuticals and crop based bio factories It offers the European economy the potential of high quality knowledge based job creation and the European consumer better quality tastier and more nutritious food Though there is public concern of genetic engineering those who are close to the science understand that this is the next big frontier to be crossed The potential and opportunities offered by plant biotechnology must not be missed We must go forward on that basis rather than turning our backs on the science Phytosfere 99 provides a comprehensive overview for plant biotechnology It combines specific scientific articles review articles and comments from outside people on it which is unique in European Literature
