*Diversification* Theodore Delevoryas,1977      **Plant Defense** Dale Walters,2011-06-09 Plant Defense provides an overview of all major aspects of plant defence including defence against pathogens parasites and invertebrate and vertebrate herbivores The book looks at defense mechanisms including structural and chemical defences and constitutive and inducible defences Including details of how plants sense attack and how this is communicated within the plant and also to neighbouring plants how plants coordinate defence responses to simultaneous multiple attacks and the energy and resources expended by a plant in maintaining and implementing its defence systems      **Phanerozoic Diversity Patterns** J. Valentine,2014-07-14 Here twenty one leading paleontologists use important refinements in fossil diversity data to provide critical evaluations of older hypotheses of diversification and extinction processes and to propose fresh interpretations Originally published in 1986 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905      **Plant Diversity Patterns and Drivers** Qing Zhang,Gang Feng ,Jinliang Liu,2024-09-20 Biodiversity can provide a series of important ecosystem functions and ecosystem services which meet the needs of human beings Plants are the biological group with the highest carbon content on earth their diversity has attracted increased attention The interpretation of plant diversity patterns and drivers is crucial for the conservation and utilization of plant resources and is also one of the hot topics in plant science and ecology There are already many studies on the patterns and drivers of plant diversity including different diversity dimensions e g taxonomic phylogenetic and functional diversity and spatial scales different plots sites watershed country continent and globe The mechanisms underlying plant diversity patterns are also quite complex For example many hypotheses are related to contemporary climate and soil conditions with temperature precipitation and soil nutrient being the most discussed drivers In addition paleoclimate and geological events may also have a strong legacy on current plant diversity patterns Except for these natural factors many anthropogenic activities including agriculture deforestation grazing urbanization and coal mining are also important drivers of plant diversity These anthropogenic activities can affect plant diversity patterns not only directly but also indirectly through their effects on habitat loss and habitat fragmentation Therefore the current plant diversity patterns are the result of many interacting factors and need to be interpreted from a more comprehensive perspective This Research Topic will therefore provide a platform for sufficient communication aiming to integrate the research from different fields and deepen the understanding of the patterns and drivers of plant diversity We encourage the submission of theoretical and experimental studies on different plant groups such as seed plants ferns mosses and algae Studies based on new methods and technology such as genomics and drones are also welcomed We welcome the following

specific topics Effects of historical factors such as paleoclimate geological events on plant diversity Plant diversity that driven by contemporary climate and anthropogenic activities The effect of habitat loss and fragmentation on plant diversity New methods of research on the patterns and drivers of plant diversity      *Measuring Plant Diversity* Thomas J. Stohlgren,2007 Here is a thorough presentation and critique of the sampling approaches designs and field techniques for measuring plant diversity Ecologists interested in assessing landscapes and ecosystems must measure biomass cover and the density or frequency of various key species Recently sampling designs for measuring species richness and diversity patterns of plant diversity species environment relationships and species distributions have become finer grained as it has become increasingly important to accurately map and assess rare species for conservation This book lays out the range of current methods for mapping and measuring species diversity for field ecologists resource managers conservation biologists and students as a tool kit for future field measurements of plant diversity      *Biodiversity* David L. Hawksworth,Royal Society (Great Britain),1995-11-30 Leading experts on the field of biodiversity examine examples from a wide range of organism groups Their approaches include the latest molecular and phylogenetic techniques through to the selection of indicator data and aspects of sampling This paperback edition has been published for students on biodiversity related courses      *Plant Diversity in Biocultural Landscapes* Siva Ramamoorthy,Inocencio E Buot Jr.,C Rajasekaran,2023-06-09 The edited book highlights comprehensive studies on plant diversity dynamics ecosystem processes and best conservation practices from the interdisciplinary perspectives such as the botanists ecologists conservation biologists geneticists cell biologists molecular biotechnologists and social scientists The main focus of the book is to address biodiversity loss and ecosystem collapse amidst the escalating climate change problems aggravated by anthropogenic activities in biocultural landscapes The book describes the biocultural landscape of today ecology of plant diversity botany of keystone and other rare species of economic and pharmaceutical significance ecosystem processes conservation and emerging frameworks to sustain biocultural landscapes in the Anthropocene Biocultural landscapes are tracks of land in many parts of the world shaped by unique human nature interactions Many of these landscapes are populated with indigenous peoples with a unique way of life including their interaction with plants and the environment The relationship between humans and nature in biocultural landscapes used to be harmonious However as the human population surges much pressure has been experienced by the landscape hence the loss of biodiversity and degradation of ecosystem services that cascade to agricultural systems The book is of interest to teachers professors policymakers researchers and advocates in the fields of botany ecology taxonomy biodiversity conservation environmental science molecular biology and genomics molecular ecology agriculture and Agri tourism forestry social science and climate change professionals Also the book serves as a good reference and additional reading material for undergraduate and graduate students      **Rapidly Evolving Genes and Genetic Systems** Rama S. Singh,Jianping Xu,Rob J. Kulathinal,2012-06-28 A range of theories on the rates of evolution from static to gradual to
