*Abiotic Stress Signaling in Plants: Functional Genomic Intervention* Girdhar K. Pandey, Manoj Prasad, Amita Pandey, Maik Boehmer, 2016-08-08 Abiotic stresses such as high temperature, low temperature, drought and salinity limit crop productivity worldwide Understanding plant responses to these stresses is essential for rational engineering of crop plants In *Arabidopsis* the signal transduction pathways for abiotic stresses, light, several phytohormones and pathogenesis have been elucidated A significant portion of plant genomes in *Arabidopsis* and rice were mostly studied encodes for proteins involved in signaling such as receptor sensors, kinases, phosphatases, transcription factors and transporters/channels Despite decades of physiological and molecular effort, knowledge pertaining to how plants sense and transduce low and high temperature, low water availability, drought, water submergence, microgravity and salinity signals is still a major question for plant biologists One major constraint hampering our understanding of these signal transduction processes in plants has been the lack or slow pace of application of molecular genomic and genetics knowledge in the form of gene function In the post-genomic era one of the major challenges is investigation and understanding of multiple genes and gene families regulating a particular physiological and developmental aspect of plant life cycle One of the important physiological processes is regulation of stress response which leads to adaptation or adjustment in response to adverse stimuli With the holistic understanding of the signaling pathways involving not only one gene family but multiple genes or gene families plant biologists can lay a foundation for designing and generating future crops which can withstand the higher degree of environmental stresses especially abiotic stresses which are the major cause of crop loss throughout the world without losing crop yield and productivity Therefore in this eBook we intend to incorporate the contribution from leading plant biologists to elucidate several aspects of stress signaling by functional genomics approaches
