Microbial Diversity in Ecosystem Sustainability and Biotechnological Applications Tulasi Satyanarayana, Subrata Kumar Das, Bhavdish Narain Johri, 2019-09-06 This volume comprehensively reviews recent advances in our understanding of the diversity of microbes in various types of terrestrial ecosystems such as caves, deserts and cultivated fields. It is written by leading experts and highlights the culturable microbes identified using conventional approaches as well as non-culturable ones unveiled with metagenomic and microbiomic approaches. It discusses the role of microbes in ecosystem sustainability and their potential biotechnological applications. The book further discusses the diversity and utility of ectomycorrhizal and entomopathogenic fungi and yeasts that dwell on grapes. It examines the biotechnological applications of specific microbes such as lichens, xylan and cellulose saccharifying bacteria and archaea, chitinolytic bacteria, methanogenic archaea and pathogenic yeasts.

Plant Genetic Resources B. S. Dhillon, 2006 Food is the basic need of human beings. The increasing population and enhanced standard of living are placing greater demands on food-related requirements in terms of quantity, quality and diversity. The Green Revolution, which significantly enhanced productivity of important food crops, nevertheless resulted in certain fallouts as genetic erosion, soil degradation, chemical pollution and aquifer depletion. Amongst these, decrease in plant genetic diversity is an irreversible loss. As the basic raw material for future plant breeding, plant genetic resources of foodgrains are the key to future food security. Though plant breeding has attracted the attention of many authors, plant genetic resources remain somewhat neglected. This book gives an overall perspective of the current status of genetic resources of important foodgrain crops: wheat, rice, maize, barley, sorghum, millets, pulses and legumes, and underutilized crops. It provides a comprehensive compilation of information on origin, taxonomy, diversity, collection, exchange, evaluation, utilization, molecular characterization and conservation for food grain crops. Eminent scientists and crop specialists have critically analyzed the information in view of the present and future research priorities. In addition, management issues related to plant genetic resources are also discussed. At present, such information on these crops is lacking, and this book fills the void. It shall serve as a reference for genetic resource managers, researchers, teachers, students and policy makers in biology and agriculture.

Conserving Biological Diversity in Managed Tropical Forests Jill M. Blockhus, 1992 At the meeting of the International Tropical Timber Organization held in Bali in 1990, ITTO adopted the target of ensuring that all tropical timber marketed internationally should by the year

2000 come from forests that are managed sustainably This study is an attempt to determine whether the member countries of the ITTO have a legal and administrative basis for managing their production forests in ways which will allow these forests to contribute to biological diversity conservation It also attempts to assess the extent to which such management is already applied on the ground through member country studies A set of guidelines on ways in which management of production forests could be improved is included
