Plants On Islands:

Plants on Islands Martin L. Cody, 2019-04-30 This thorough and meticulous study the result of nearly a quarter century of research examines the island biogeography of plants on continental islands in Barkley Sound British Columbia Invaluable both because of its geographical setting and because of the duration of the study *Plants on Islands* summarizes the diversity dynamics and distribution of the approximately three hundred species of plants on more than two hundred islands Martin Cody uses his extensive data set to test various aspects of island biogeographic theory His thoughtful analysis constrained by taxon and region elucidates and enhances the understanding of the biogeographic patterns and dynamics He provides an overview of the basic theory concepts and analytical tools of island biogeography Also discussed are island relaxation to lower equilibrium species numbers post isolation plant distributions variously limited by island area isolation and climatic differences adaptation to local abiotic and biotic environments within islands and the evolution of different island phenotypes The book concludes with a valuable consideration of equilibrium concepts and of the interplay of coexistence and competition Certain to challenge *Plants on Islands* is among the first books to critically analyze the central tenets of the theory of island biogeography

Oceanic Islands Tod F. Stuessy, Daniel J. Crawford, Patricio López-Sepúlveda, Eduardo A. Interactions on Islands Xoaquín Moreira, Luis Abdala-Roberts, 2024-01-03 Theory and early empirical work posed that herbivore pressure should be lower on islands than on the mainland owing to lower herbivore abundance and diversity in insular systems Consequently plant taxa found on islands are expected to be less protected or even to have lost their defences completely While early observational studies supported the prediction of lower herbivory and plant defences on islands recent island mainland comparisons have yielded mixed results with some studies finding no differences between islands and mainlands or surprisingly higher herbivory and plant defences on islands In this book the authors aim to reassess current theory and initiate a new generation of work on insularity effects on plant herbivore interactions This book aims to fill the research gaps by integrating the research that has been done to date and by compiling and summarising new research on insularity effects on plant herbivore interactions It provides a critical examination of the patterns in light of classical theory and identifies potential mechanisms or underlying processes It also aims to raise new questions that will form the basis for a revised and more robust research programme *Wayside Plants of the Islands* W. Arthur Whistler, 1995

Wayside Plants of the Islands has been designed as a guide book to the identification of the most common plant species encountered in the lowlands of the Pacific Islands It is based upon the author's 25 years of botanical excursions in Hawaii i Samoa Tonga Tahiti Fiji Guam Belau Palau and the other Pacific Islands The lowlands here have been highly disturbed and

are now entirely dominated by alien weedy species This guide book includes color photos of 170 of the most common of these lowland species with descriptions and other pertinent information Most of the plants covered are widespread species that may be found in any part of the tropics so this book is useful throughout the tropical Pacific and beyond
