

FBS 31 – Plant Physiology

Plant Physiology

It is the science that studies about plant functions, the physical and chemical processes occurring in the plants. It deals on how plants develop, grow and respond to their environment at the cellular and biochemical level.

Plant Physiologist

Interested in the nutrition of plants, influence of the environment upon plant processes, the products of plant activities, and the sequence of events that results in growth and development of plants.

Plants respond to a variety of environmental conditions

- Light (photoperiod)
- Temperature
- Gravity
- Nutrient and water availability

Activities of many plant species:

- Seed germination
- Growth (stems, roots, leaves, buds, etc.)
- Flowering
- Opening and closing of stomata
- Tropism, etc.

What Plants Do?

- Find water and nutrients and transport them to where they are needed within the plant
- Carry out photosynthesis and respiration
- Grow and reproduce
- Protect themselves from herbivores and pathogens, etc.

The Role of Plant Physiology in Forest

- How the plants grow and how the benefits accruing from their presence can be maximized.
- leaf and branch pruning, timber stand improvement techniques, mulching, weeding, etc. have physiological basis.

Plants at Work Frederick Campion Steward,1964 **Plants at work** F. C. Steward,1967 **Plants at work** Frederick C. Steward,1967 **Plant Physiology** Hans Mohr,Peter Schopfer,2012-12-06 In this comprehensive and stimulating text and reference the authors have succeeded in combining experimental data with current hypotheses and theories to explain the complex physiological functions of plants For every student teacher and researcher in the plant sciences it offers a solid basis for an in depth understanding of the entire subject area underpinning up to date research in plant physiology The authors vividly explain current research by references to experiments they cite original literature in figures and tables and at the end of each chapter list recent references that are relevant for a deeper analysis of the topic In addition an abundance of detailed and informative illustrations complement the text Plants at Work; a Summary of Plant Physiology [by] F. Steward,2012-12-02 Plant Physiology A Treatise Volume VIA Physiology of Development Plants and Their Reproduction explores the various problems of development and reproduction that arise as plants responsive to environmental stimuli develop a vegetative plant body and produce seeds and fruits or organs of perennation This book considers the morphological aspects of plant growth and development as well as the growth and reproduction of fungi physiological aspects of vegetative reproduction and flowering and perennation and dormancy This volume is organized into four chapters and begins with an overview of growth and development with reference to organization and patterns of development in vascular plants and the initiation and development of plants The discussion then shifts to vegetative sexual and asexual reproduction in fungi along with heterokaryosis and morphogenesis The next chapter explores reproduction in plant biology focusing on vegetative and sexual reproduction sex determination and photoperiodism This book concludes by considering the physiological mechanisms underlying the production of organs of perennation and the establishment of dormancy This text will be of value both to graduate students and to established investigators with specific interest in plant physiology Hormones, Receptors and Cellular Interactions in Plants C. M. Chadwick,D. R. Garrod,1986-02-06 This book takes a broad look at the current status of

research on receptors in higher and lower plants It starts with a discussion of some hormone receptors auxins ethylene and gibberellin in higher plants and then considers the role of cyclic AMP and its receptors in the slime mould Dictyostelium

Water Relations of Plants and Soils Paul J. Kramer, John S. Boyer, 1995-07-28 Water Relations of Plants and Soils successor to the seminal 1983 book by Paul Kramer covers the entire field of water relations using current concepts and consistent terminology Emphasis is on the interdependence of processes including rate of water absorption rate of transpiration resistance to water flow into roots soil factors affecting water availability New trends in the field such as the consideration of roots rather than leaves as the primary sensors of water stress are examined in detail Addresses the role of water in the whole range of plant activities Describes molecular mechanisms of water action in the context of whole plants Synthesizes recent scientific findings Relates current concepts to agriculture and ecology Provides a summary of methods

Morphological Plant Modeling: Unleashing Geometric and Topological Potential within the Plant Sciences

Alexander Bucksch, Dan Chitwood, 2017-10-13 An increasing population faces the growing demand for agricultural products and accurate global climate models that account for individual plant morphologies to predict favorable human habitat Both demands are rooted in an improved understanding of the mechanistic origins of plant development Such understanding requires geometric and topological descriptors to characterize the phenotype of plants and its link to genotypes However the current plant phenotyping framework relies on simple length and diameter measurements which fail to capture the exquisite architecture of plants The Research Topic Morphological Plant Modeling Unleashing Geometric and Topological Potential within the Plant Sciences is the result of a workshop held at National Institute for Mathematical and Biological Synthesis NIMBioS in Knoxville Tennessee From 2-4 September 2015 over 40 scientists from mathematics computer science engineering physics and biology came together to set new frontiers in combining plant phenotyping with recent results from shape theory at the interface of geometry and topology In doing so the Research Topic synthesizes the views from multiple disciplines to reveal the potential of new mathematical concepts to analyze and quantify the relationship between morphological plant features As such the Research Topic bundles examples of new mathematical techniques including persistent homology graph theory and shape statistics to tackle questions in crop breeding developmental biology and vegetation modeling The challenge to model plant morphology under field conditions is a central theme of the included papers to address the problems of climate change and food security that require the integration of plant biology and mathematics from geometry and topology research applied to imaging and simulation techniques The introductory white paper written by the workshop participants identifies future directions in research education and policy making to integrate biological and mathematical approaches and to strengthen research at the interface of both disciplines
