Brader, 2013-06-29 This book has been written as part of a series of scientific books being published by Plenum Press The scope of the series is to review a chosen topic in each volume To supplement this information the abstracts to the most important references cited in the text are reprinted thus allowing the reader to find in depth material without having to refer to many additional publications This volume is dedicated to the field of dry plasma etching as applied in silicon semiconductor processing Although a number of books have appeared dealing with this area of physics and chemistry these all deal with parts of the field This book is unique in that it gives a compact yet complete in depth overview of fundamentals systems processes tools and applications of etching with gas plasmas for VLSI Examples are given throughout the fundamental sections in order to give the reader a better insight in the meaning and magnitude of the many parameters relevant to dry etching Electrical engineering concepts are emphasized to explain the pros and cons of reactor concepts and excitation frequency ranges In the description of practical applications extensive use is made of cross referencing between processes and materials as well as theory and practice It is thus intended to provide a total model for understanding dry etching The book has been written such that no previous knowledge of the subject is required It is intended as a review of all aspects of dry etching for silicon semiconductor processing

Electron Impact Ion Sources for Charged Heavy Ions Grigory D. Shirkov, Günter Zschornack, 2013-06-29 Presently many different types of ion sources exist worldwide for producing highly charged ions The object of the present book is the treatment of electron impact ion sources like ECR Electron Cyclotron Resonance ion sources EBIS Electron Beam Ion Sources EBIT Electron Beam Ion Trap and ERIS Electron Ring Ion Sources which altogether are able to produce ions of high charge states This criterion delimits the book according to classic ion sources which as a rule can deliver high currents of low charged ions In the last decades there has been an intense development and building up of sources of highly charged ions The first impetus to the building of such sources came from heavy ion accelerator centers since the effectiveness of a heavy ion

accelerator is predominantly determined by the available ion sources. Thereby the critical criteria for the operation of an ion source are the charge state distribution of the ions produced and the intensity of the extracted ion currents. Besides the employment of sources of highly charged ions in accelerator centers, such sources increasingly are inserted separately from accelerators for basic investigations in atomic physics, surface physics and related areas.

Non-Linear Theory and Fluctuations A. I. Akhiezer, I. A. Akhiezer, R. V. Polovin, 2017-03-22. Plasma Electrodynamics Volume 2: Non-Linear Theory and Fluctuations deals with the theory of nonlinear waves in a collisionless plasma, including the quasilinear theory, the theory of plasma turbulence and the theory of electromagnetic fluctuations in a plasma. Topics covered range from nonlinear high frequency waves in a cold plasma to the theory of plasma oscillations in the quasilinear approximation. Nonlinear wave-particle interactions are also discussed along with scattering and transformation of waves in a plasma. Comprised of six chapters, this volume begins with a study of nonlinear waves in a collisionless plasma, focusing on nonlinear high frequency waves in a cold plasma, Langmuir waves in a non-relativistic plasma and longitudinal, transverse and coupled longitudinal-transverse waves in a relativistic plasma. After expounding on the quasilinear theory, which describes the effects of the first approximation in terms of the plasma wave energy, the nonlinear interaction of waves and particles is considered. The last three chapters explore the theory of electromagnetic fluctuations in a plasma, the theory of scattering processes and the transformation of waves in a plasma, and the scattering of charged particles in a plasma. The polarization energy losses when charged particles move in a plasma are calculated. This book will be of interest to physicists.
