Homeostatic Blood States Theory Audrius Andrijauskas, 2008-01-31 Intravenous fluid and blood component resuscitation is an integral part of modern medicine practice in a variety of medical fields. However, these therapies are usually led by rigid and very approximate guidelines. The purpose of creating the Homeostatic blood states theory was to develop more accurate guidelines. On the basis of the new theory, the following results have been reached: 1. The physiological mathematical model explaining blood volume homeostasis has been created. 2. Nomograms for infusion therapy measures blood loss evaluation and calculating red blood cell transfusion amount were proposed. 3. Nomograms were built on the background of interfering relationship of blood hematocrit and hemoglobin concentration. 4. New guidelines for infusion therapy blood loss evaluation and calculating transfusion amount for proper hematocrit increase were proposed. 5. New method for early verification of occult bleeding has been suggested. Three major homeostatic blood states were described: 1. target state, 2. state of maximal isoosmotic plasma dilution, and 3. dehydration. Target states maintain optimal red cell mass and blood volume correlation. Other two maintain critical plasma hydration. Origin deviations from target state. Three new nomograms enable planning and evaluation of infusion therapy and red cell mass transfusion. Quantitative evaluation of blood loss and early detection of occult bleeding based on the dynamics of blood hematocrit and hemoglobin concentration. *Textbook of Medical Physiology -*

E-Book Indu Khurana, Arushi Khurana, Narayan Gurukripa Kowligi, 2024-09-03 The fourth edition of this well-known book has been thoroughly revised and updated as per the suggestions and feedback from students and teachers. The text has been arranged in three parts, and each part has been further subdivided into twelve sections and seventy-eight chapters. Part I: General Physiology includes one section having five chapters. Part II: Systemic Physiology has been arranged into ten sections, one on each body system. Part III: Specialized integrated physiology includes one section comprising of eight chapters. New to This Edition: Addition of a new chapter on Physiology of Yoga explains the effectual relationship between aspects of yoga practice and human physiology. New applied aspects to emphasize the clinical significance of physiology have been included. Additional important notes have been threaded, re-emphasizing the core concepts. Self-assessment of the topics studied have been introduced at the end of each chapter to help revision. Clinical cases are presented for problem-based learning and knowledge at the end of chapters. Salient Features: Extensive revision of chapters as per the basis on scientific advancement and subject requirement. 1140 Illustrations in the form of line diagrams, flowcharts, clinical photographs incorporated to enhance visual representation. Applied aspects highlighted in the boxes presented with recent molecular concepts on pathophysiology, advances in investigative and therapeutic principles. Important notes highlight the additional valuable information wherever relevant for quick revision. Online resource at www.medenact.com. Complimentary access to full ebook.
