## **Plastic Packages For Foodstuffs:**

**Plastic Packaging Materials for Food** Otto G. Piringer, A. L. Baner, 2008-07-11 Plastics have developed into the most important class of packaging materials. Their relative impermeability for substances from the surroundings has great influence on the shelf life and the quality of the packed goods. At the same time the interaction between the contents and the various components of the packaging plays a decisive role. This particular book is indispensable in the search for the optimal plastic packaging. It facilitates the estimation of the influence on the goods which come from the surroundings and from the packaging. The authors do not restrict themselves only to the description of the phenomena of diffusion or transport in theory but they show what they mean for practical applications. Food represents the central theme as main area of application for plastic packaging. It can be considered to be the model substance and the findings are to be applied to many other products and systems. The main rules and regulations for food packaging of the European Community and the United States are presented in this book. Furthermore the authors emphasize the testing methods for proving the mass transport and the sensory check of the quality of the products. Plastic Packages for Foodstuffs Karl Figge, 1996-01

achieve targeted structural morphologies and physical and chemical properties for use in food packaging applications. In line with bio based and or biodegradable plastic matrices the current status of the development of multifaceted bionanofillers is also explored in detail. This book begins by addressing the past present and future prospects of bio based and or biodegradable polymers in specific food packaging applications and the importance and advantages of such packaging over fossil polymer based packaging materials. Furthermore this book also examines the current commercial overview of bio based and or biodegradable polymers and nanocomposites and the structure property relationship required for various advanced applications. Individual chapters detail bio based polymers bio derived and microbial derived plastics which include exclusive investigations on the most promising polymers such as polylactic acid PLA and polyhydroxyalkanoates PHA and their bionanocomposites for food packaging applications. Detailed discussions highlight the various properties of polymers for food packaging applications including bio based and or biodegradable polymers and nanocomposites. The processing of blends using bio based and or biodegradable polymers and non degradable polymers for food packaging applications are also featured. In addition extensive discussions include different edible biopolymer based coatings on food items which can act as effective carriers for improving the shelf life of food. Moreover various end of life solutions of plastics such as recycling reuse composting and so on for the safe disposal of plastic waste are reviewed. Finally this book discusses migration studies and safety legislation and regulations of such packages in contact with food which are currently being performed by various organisations across the world. **A Handbook of Food Packaging** Frank A. Paine, Heather Y. Paine, 2012-12-06 This is the second edition of a successful title first published in 1983 and now therefore a decade out of date. The authors consider the development of the right package for a particular food in a particular market from the point of view of the food technologist the packaging engineer and those concerned with marketing. While the original format has been retained the contents have been thoroughly revised to take account of the considerable advances made in recent years in the techniques of food processing packaging and distribution. While efficient packaging is even more a necessity for every kind of food whether fresh or processed and is an essential link between the food producer and the consumer the emphasis on its several functions has changed. Its basic function is to identify the product and ensure that it travels safely through the distribution system to the consumer. Packaging designed and constructed solely for this purpose adds little or nothing to the value of the product merely preserving farm or processor freshness or preventing physical damage and cost effectiveness is the sole

criterion for success If however the packaging facilitates the use of the product is reusable or has an after use some extra value can be added to justify the extra cost and promote sales Many examples of packaging providing such extra value can be cited over the last decade
