Plastic And Reconstructive Surgery:

Plastic and Reconstructive Surgery Ross Farhadieh, Neil Bulstrode, Sabrina Cugno, 2015-06-02 Plastic and reconstructive surgery continues to evolve as new techniques open up new possibilities for the surgeon. In this groundbreaking textbook, contemporary approaches are explained and demonstrated to allow trainee and experienced surgeons alike to understand and assimilate best practice. Containing over 300 outstanding color figures demonstrating surgical practice, an international cast of leading surgeons show the paths to effective plastic surgery technique and outcomes. They cover all the major bases including Integument, Pediatric Plastic Surgery, Head and Neck Reconstruction, The Breast, Trunk, Lower Limb and Sarcomas, Upper Limb and Hand Surgery, Aesthetic Surgery. Comprehensive in scope, practical in nature, *Plastic and Reconstructive Surgery* is your one-stop guide to successful surgical management of your patients. This textbook is aimed at the trainee and young plastic surgeon, but it is extremely comprehensive and sufficiently detailed for any practitioner. The information is succinct yet complete and up to date. For a single volume book, the detailed knowledge presented is impressive. I think this is a great book. It is packed with good and up to date information, and I think it will be an invaluable resource for trainees but also for all plastic surgeons. The editors are to be congratulated on achieving a very difficult task with such success. From a review by Peter C Neligan MB in *Plastic and Reconstructive Surgery*. This is exactly what the editors of *Plastic and reconstructive surgery: Approaches and Techniques* set out to achieve in producing this excellent textbook. It is truly an international effort at all levels, as the editors from Australia, Ross D Farhadieh, the UK, Neil W Bulstrode, and Canada, Sabrina Cugno, have joined forces to recruit over 130 international contributors and produce a resource of over 1100 pages that provides a well-organized and thorough yet succinct text of the essentials of current plastic surgery. Many of the contributors are world-renowned experts; however, there is also a new generation of young rising stars whose contributions are equally good, providing a new, fresh and contemporary feel. From the Foreword by Julian J Pribaz, Professor of Surgery, Harvard Medical School. The authors here have concentrated all this useful information into their chapters in a quite outstanding manner. Any plastic surgeon of whatever maturity will find this an excellent purchase which he/she will have no reason to regret. From a review by Douglas H Harrison in *Journal of Plastic Reconstructive Aesthetic Surgery*.

Plastic and Reconstructive Surgery Maria Z. Siemionow, 2015-01-12 There is a paradigm shift in plastic and reconstructive surgery from the interest of developing new surgical techniques into the application of new technologies via research-based studies on stem cells, tissue engineering, and new fields of reconstructive transplantation such as e.g. face, hand, or larynx transplants. This approach is relatively novel and introduced to plastic surgery within the past decade. Thus, there is an urgent need to facilitate access to this new knowledge, which was not traditionally a part of plastic surgery curriculum. The most efficient way of introducing these new approaches is via presentation of pertinent to different fields: stem cell transplantation, nerve regeneration, tissue engineering, experimental models, which can be used as a tool to develop

technologies of interest by different groups of surgeons These surgical specialties which will be interested and benefit from the book include plastic and reconstructive surgeons microsurgeons hand surgeons orthopaedic surgeons neurosurgeons and transplant surgeons
