Plastics Anne Gunnison, David Joselit, 2025-11-11 Why modern and contemporary art and art conservation can't be understood without taking account of the revolutionary impact of plastics Modern and contemporary art wouldn't exist without the invention of plastics From sculpture to paint and photography to film plastics have shaped every major medium of art In turn plastics have revolutionized art conservation transforming the possibilities of preservation but also producing new challenges for conservators struggling to preserve toxic and degrading material Hailed as utopian in the twentieth century plastics today are often understood as pollution and waste a central cause of ecological crisis Plastics is the first book to address the multifaceted history of plastics from the perspective of artists art historians conservators and environmental scientists Plastics demonstrates that this material cannot easily be summarized as toxic or utopian catastrophic or necessary Instead plastics define the modern world in both its possibility and failures The book also reveals how artists have been a critical overlooked voice in debates about plastics and how they have offered theories of the material through works that explore its potential and harmfulness Presenting a variety of perspectives on the world of plastics through the lens of art artmaking art history and art conservation Plastics shows why and how coming to terms with this material is critical to understanding not only modern and contemporary art and art conservation but also the crises of the twenty first century

Making the Modern World Vaclav Smil, 2013-12-16 How much further should the affluent world push its material consumption Does relative dematerialization lead to absolute decline in demand for materials These and many other questions are discussed and answered in Making the Modern World Materials and Dematerialization Over the course of time the modern world has become dependent on unprecedented flows of materials Now even the most efficient production processes and the highest practical rates of recycling may not be enough to result in dematerialization rates that would be high enough to negate the rising demand for

materials generated by continuing population growth and rising standards of living This book explores the costs of this dependence and the potential for substantial dematerialization of modern economies Making the Modern World Materials and Dematerialization considers the principal materials used throughout history from wood and stone through to metals alloys plastics and silicon describing their extraction and production as well as their dominant applications The evolving productivities of material extraction processing synthesis finishing and distribution and the energy costs and environmental impact of rising material consumption are examined in detail The book concludes with an outlook for the future discussing the prospects for dematerialization and potential constraints on materials This interdisciplinary text provides useful perspectives for readers with backgrounds including resource economics environmental studies energy analysis mineral geology industrial organization manufacturing and material science **Plastics and the Ocean** Anthony L.

Carlin, 2021-03-31

Plastics Sustainability clearly lays out the thorny and contentious issues that we encounter at the nexus of plastics and sustainability The book serves as a practical guide for making sustainability decisions about how plastics are made and used including current developments in the newest bio based plastics Designers marketers academics and engineers will all find something of value in this balanced and thoughtful second edition Increased public scrutiny of plastics materials and the plastics

industry has led paradoxically to both a deeper understanding and growing confusion about polymers their origins their uses their risks and ultimately their disposal The author makes objective comparisons among major polymer grades and bioplastics including their life cycle assessments and practical performance in commercial applications *Plastics Engineering* R. J Crawford,P. J. Martin,2020-01-22 *Plastics Engineering* Fourth Edition presents basic essentials on the properties and processing behaviour of plastics and composites The book gives engineers and technologists a sound understanding of basic principles without the introduction of unduly complex levels of mathematics or chemistry Early chapters discuss the types of plastics currently available and describe how designers select a plastic for a particular application Later chapters guide the reader through the mechanical behaviour of materials along with a detailed analysis of their major processing techniques and principles All techniques are illustrated with numerous worked examples within each chapter with further problems provided at the end This updated edition has been thoroughly revised to reflect major changes in plastic materials and their processing techniques that have occurred since the previous edition The plastics and processing techniques addressed within the book have been comprehensively updated to reflect current materials and technologies with new worked examples and problems also included Gives new engineers and technologists a thorough understanding of the essential properties and processing behavior of plastics and composites Presents a great source of foundational information for students early career engineers and researchers Demonstrates how basic engineering principles in design mechanics of materials fluid mechanics and thermodynamics may be applied to the properties processing and performance of modern plastic materials **The Lifecycle Analysis of Materials Competition for Pipe in the Construction Industry** S.

Joyce,1991 *The Routledge Handbook of Archaeology and Plastics* Genevieve Godin,Þóra Pétursdóttir,Estelle Praet,John Schofield,2024-09-17 *The Routledge Handbook of Archaeology and Plastics* investigates the archaeology of the contemporary world through the lens of its most distinguishing and problematic material Plastics are ubiquitous and have been so for nearly three generations since they became widely used in the early 1950s Plastics will persist for millennia their legacies as toxic heritage being felt deep into the future In this book comprising 32 original at times disturbing and critically engaged contributions scholars from archaeology and other cognate disciplines explore plastics from a number of different angles and perspectives Together these contributions highlight the dilemma that plastics present their usefulness on the one hand and the threats they present to environmental health on the other The volume also explores the lessons that archaeologists can learn from plastics about episodes of mass production consumption and toxicity in the past and also importantly about the future This important and timely collection will therefore be of interest to all archaeologists irrespective of their period of study or their geographical focus and to students of archaeology and cultural heritage It will also be relevant for researchers and students in other fields of study that focus on plastics and their environmental and social impacts Ultimately this book concerns the contemporary world and the impact of people upon it

Plastic Matter Heather Davis, 2022-02-04 Plastic is ubiquitous It is in the Arctic in the depths of the Mariana Trench and in the high mountaintops of the Pyrenees It is in the air we breathe and the water we drink Nanoplastics penetrate our cell walls Plastic is not just any material it is emblematic of life in the twentieth and twenty first centuries In *Plastic Matter* Heather Davis traces plastic's relations to geology media biology and race to show how matter itself has come to be understood as pliable disposable and consumable The invention and widespread use of plastic Davis contends reveals the dominance of the Western orientation to matter and its assumption that matter exists to be endlessly manipulated and controlled by humans Plastic's materiality and pliability reinforces these expectations of what matter should be and do Davis charts these relations to matter by mapping the queer multispecies relationships between humans and plastic eating bacteria and analyzing photography that documents the racialized environmental violence of plastic production In so doing Davis provokes readers to reexamine their relationships to matter and life in light of plastic's saturation
