Book catalog of the Library and Information Services Division Environmental Science Information Center. Library and Information Services Division, 1977 Book Catalog of the Library and Information Services Division: Shelf List catalog Environmental Science Information Center. Library and Information Services Division, 1977 *Drifting Continents and Colliding Paradigms* John A. Stewart, 1990-05-22 The book provides an excellent historical summary of the debates over continental drift theory in this century Contemporary Sociology This is a useful discussion of the way that science works The book will be of value to philosophers of science Choice will find an important place in university and department libraries and will interest aficionados of the factual and intellectual history of the earth sciences Terra Nova an excellent core analysis The Times Higher Education Supplement an ambitious and important contribution to the new sociology of science American Journal of Sociology Stewart's book is a noble effort an interesting and readable discussion and another higher notch on the scoreboard of critical scholarship that deserves wide examination and close attention Geophysics This fascinating book describes the rise and fall and rebirth of continental drift theory in this century It uses the recent revolution in geoscientists' beliefs about the earth to examine questions such as How does scientific knowledge develop and change The book also explores how well different perspectives help us to understand revolutionary change in science *Paleocurrents and Basin Analysis* P. E. Potter, F. J. Pettijohn, 2012-12-06 The study of paleocurrents since 1963 is now a very routine part of sedimentology and more and more such studies are finding use in other fields Thus it seemed appropriate for us to review post 1963 developments and present them in a compact manner for the interested reader Instead of rewriting a second edition which thirteen years later we would organize in a completely different way we have brought each chapter up to date with new material up to 1976 A new update supplement has in this edition been inserted after each one of the original chapters We have stayed close to the original theme of paleocurrents how to measure them and how to use them to solve geological problems ranging in scale from the hand specimen to the sedimentary basin and beyond We have used many annotated references and tables to help present this information to the reader The reader will note that we have cited a few 1962 references publications that appeared too late to be cited in the original 1963 edition A few times we have also cited a reference which was included in the first edition These are marked with an asterisk and hence do not appear in the new lists of references We have been aided by many In Cincinnati WANDA OSBORNE and JEAN CARROL did typing and RICHARD SPOHN the University's geological librarian was very helpful in obtaining many references to the literature **Geological Survey Professional Paper**, 1979 Biogeography and Ecology of Southern Africa Marinus J.A. Werger, A.C. van Bruggen, 2012-12-06 Southern Africa is certainly not a naturally bounded area so that there are several possibilities for delineating it and concepts about its extent Wellington discussed the various possibilities for delineation and suggested that one line stands out more clearly and definitely as a physical boundary than any other namely the South Equatorial Divide the

watershed between the Zaïre Cuanza and Rufiji Rivers on the one hand and the Zambezi Cunene and Rovuma Rivers on the other This South Equatorial Divide is indeed a major line of separation for some organisms and is also applicable in a certain geographical sense though it does not possess the slightest significance for many other groups of organisms ecosystems or geographical and physical features of Africa The placing of the northern boundary of southern Africa differs in fact strongly per scientific discipline and is also influenced by practical considerations regarding the possibilities of scientific work as subordinate to certain political realities and historically grown traditions This is illustrated for example in such works as the Flora of Southern Africa where the northern boundary of the area is conceived as the northern and eastern political boundaries of South West Africa South Africa and Swaziland Botswana traditionally included in the area covered by the Flora Zambesiaca thus forms a large wedge in Southern Africa Proterozoic Tectonic Evolution of the Grenville Orogen in North America Richard P. Tollo, 2004-01-01 **Geological Survey Professional Paper** Geological Survey (U.S.), 1975 *U.S. Geological Survey Professional Paper*, 1987 *Publications of the Geological Survey* Geological Survey (U.S.), 2000

Hendricks, 1985 This extensively illustrated volume is a definitive sourcebook on the utilization of arid lands It offers a wealth of current knowledge about the nature and distribution of the soils of Arizona and their relation to the diversity of geology climate vegetation and fauna of the state **Special Papers**, 1975 **Paperbound Books in Print**, 1991 **Conodont Biofacies and Provincialism** David Leigh Clark, 1984 **The Geology of the Atlantic Ocean** Kenneth O. Emery, Elazar Uchupi, 2012-12-06 The explosion of interest effort and information about the ocean since about 1950 has produced many thousand scientific articles and many hundred books In

fact the outpouring has been so large that authors have been unable to read much of what has been published so they have tended to concentrate their own work within smaller and smaller subfields of oceanography. Summaries of information published in books have taken two main paths. One is the grouping of separately authored chapters into symposia type books with their inevitable overlaps and gaps between chapters. The other is production of lightly researched books containing drawings and tables from previous publications with due credit given but showing assembly line writing with little penetration of the unknown. Only a few books have combined new and previous data and thoughts into new maps and syntheses that relate the contributions of observed biological, chemical, geological and physical processes to solve broad problems associated with the shape, composition and history of the oceans. Such a broad synthesis is the objective of this book in which we tried to bring together many of the pieces of research that were deemed to be of manageable size by their originators. The composite may form a sort of plateau above which later studies can rise possibly benefited by our assembly of data in the form of new maps and figures.
