Platelet Activating Factor And Related Lipid Mediators:

Platelet-Activating Factor and Related Lipid Mediators F. Snyder, 2013-11-11 Platelet activating factor PAF is the commonly used name for a group of potent biologically active ether linked phospholipids the alkylacetyl glycerophosphocholines Following the identification of the chemical structure of PAF in 1979 much progress has been made in our understanding of these phospholipid mediators This is particularly true from the points of view of their molecular structural requirements for expression of biological activity their biosynthesis and catabolism their diverse range of biological activities evidence for their specific receptors at the cell surface the development of specific antagonists for use in receptor studies and for testing as potential anti PAF drugs and implications about their involvement in health and disease Chapters in this book cover the current status of these general areas of PAF research Although an enormous amount of information has been published about this interesting new type of phospholipid mediators questions about their mechanism of action regulatory controls and the precise role and relative importance of PAF in specific diseases and physiological functions remain to be answered Since the 1979 discovery the PAF field has brought together scientists from a variety of different biomedical disciplines The diversity of scientists now in PAF research is very apparent from the number of PAF publications appearing in a wide array of scientific journals ranging from molecular biology to clinical medicine Publications related to PAF continue to increase at an amazingly rapid rate with the pace reminiscent of the period following the discovery of prostaglandins

Snyder,2014-01-15 Lipid Mediators Fiona M. Cunningham,2016-10-27 The Handbook of Immunopharmacology Lipid Mediators covers a comprehensive overview of lipid mediators from synthesis through to inhibition The book discusses the metabolism of arachidonic acid the measurement of fatty acids and their metabolites and the biological properties of cyclooxygenase products The text also describes other essential fatty acids their metabolites and cell cell interactions the inhibitors of fatty acid derived mediators as well as the biosynthesis and catabolism of platelet activating factor The cellular sources of platelet activating factor and related lipids the biological properties of platelet activating factor and the effects of platelet activating factor receptor antagonists are also considered Immunopharmacologists immunologists and pharmacologists will find the book invaluable **Platelet Activating Factor Receptor** Shivendra D. Shukla,1992-10-23 Platelet activating factor PAF is the most potent phospholipid agonist known to date PAF has a wide variety of physiological effects and has also been implicated in patho physiology of cells Since the structural elucidation of PAF in 1979 several laboratories have embarked upon characterizing the PAF receptor and its signaling pathways This book focuses on this aspect and presents the first comprehensive account of research in the area It also examines developments on the PAF receptor its cloning molecular features coupling to multiple signaling pathways and relationship to nuclear gene expression This is an excellent reference volume for all researchers studying PAF **Platelet-Activating Factor and Related Lipid Mediators 2** Santosh Nigam,Gert Kunkel,Stephen M. Vance,Dennis E. Vance,1991-12-17 The second edition of this book on lipids lipoprotein and membrane biochemistry has two major objectives to provide an advanced textbook for students in these areas

of biochemistry and to summarise the field for scientists pursuing research in these and related fields. Since the first edition of this book was published in 1985, the emphasis on research in the area of lipid and membrane biochemistry has evolved in new directions. Consequently, this second edition has been modified to include four chapters on lipoproteins. Moreover, the other chapters have been extensively updated and revised so that additional material covering the areas of cell signalling by lipids, the assembly of lipids and proteins into membranes and the increasing use of molecular biological techniques for research in the areas of lipid, lipoprotein and membrane biochemistry have been included. Each chapter of the textbook is written by an expert in the field, but the chapters are not simply reviews of current literature. Rather, they are written as current, readable summaries of these areas of research, which should be readily understandable to students and researchers who have a basic knowledge of general biochemistry. The authors were selected for their abilities both as researchers and as communicators. In addition, the editors have carefully coordinated the chapters so that there is little overlap yet extensive cross referencing among chapters.

Food Proteins and Lipids Srinivasan Damodaran, 1997-04-30 John E Kinsella, Dean of the College of Agricultural and Environmental Sciences at the University of California, Davis, passed away on May 2, 1993, at the age of 55. In August 1995, former students and post-doctoral fellows of Dr Kinsella met at the American Chemical Society National Meeting in Chicago to convene a Symposium on Food Proteins and Lipids to honor Dr Kinsella's enormous contribution to the field of food science and nutrition. This book is a collection of papers presented at that symposium. A native of Ireland, Dr Kinsella received his bachelor's degree in agricultural sciences in 1961 from the University of Dublin. He received his master's degree in biology in 1965 and a doctorate in food chemistry in 1967 from Pennsylvania State University. He joined the Food Science faculty at Cornell University in 1967. While at Cornell, he served as Chair of the Department of Food Science from 1977-1985 and Director of the Institute of Food Science from 1980-1987. He was designated Liberty Hyde Bailey Professor of Food Biochemistry in 1981, a Fulbright Fellow in 1983, and was selected as the General Foods Distinguished Professor of Food Science in 1984. He was named a Leading Professor in the State University of New York, the highest professorial honor in the SUNY system. In 1990, he joined the University of California at Davis as Dean of the College of Agricultural and Environmental Sciences.

Biochemistry of Lipids, Lipoproteins and Membranes Dennis E. Vance, J.E. Vance, 2002-12-06 The first edition of this book was published in 1985. The content of the 4th edition reflects the enormous advances that have occurred since that time in the field of lipid biochemistry. This publication is unique in that it represents a bridge between the superficial coverage of the lipid field found in basic biochemistry textbooks and the highly specialized material contained in scientific review articles and monographs. The book is not a collection of exhaustive reviews but a current and readable summary of diverse aspects of lipids. It is intended as an advanced and up-to-date textbook for teachers and students who are familiar with the basic concepts of lipid biochemistry and will also serve as a general reference book for scientists studying lipids, lipoproteins and membranes.

Lipid Mediators and Their Metabolism in the Brain Akhlaq

A. Farooqui, 2011-08-12 *Lipid Mediators and Their Metabolism in the Brain* presents readers with cutting edge and comprehensive information not only on the synthesis and degradation of glycerophospholipid sphingolipid and cholesterol derived lipid mediators but also their involvement in neurological disorders. It is hoped that this monograph will be useful not only to postgraduate student and their teachers but also to research scientists and physicians who are curious about the generation and roles of lipid mediators in the brain. Handbook of PAF and PAF Antagonists | Pierre Braquet, 2019-06-13 Published in 1991 Since its characterization in the 1970s from antigen stimulated rabbit basophils platelet activating factor PAF has been demonstrated to be produced by and act upon a variety of cell types PAF antagonists which have been obtained from both natural sources and chemical synthesis now represent a new class of therapeutic agents and may provide new prospects for treating several major pathologies particularly shock ischemia and asthma This book provides a unique overview of the chemistry molecular modeling pharmacology and clinical potential of the major classes of natural and synthetic PAF antagonists Compounds reviewed include the ginkgolides diketopiperazines neolignans hetrazepines cyclic and 1,3-dioxolan derived PAF analogs pyrrolo 1,2-c thiazoles imidazo 2,1-a isoquinolines and pyridoquinazoline carboxamides Consisting of 12 chapters written by leading experts in PAF antagonist research this book is essential reading for students researchers clinicians and medical practitioners involved in this rapidly developing field of biomedical research **The Impact of Nutrition and Statins on Cardiovascular Diseases** Ioannis Zabetakis, Ronan Lordan, Alexandros Tsoupras, 2019-01-15 *The Impact of Nutrition and Statins on Cardiovascular Diseases* presents a summary of the background information and published research on the role of food in inhibiting the development of cardiovascular diseases Written from a food science food chemistry and food biochemistry perspective the book provides insights on the origin of cardiovascular diseases an analysis of statin therapy their side effects and the role of dietary intervention as an alternative solution to preventing cardiovascular diseases It focuses on the efficacy of nutrition and statins to address inflammation and inhibit the onset of disease while also providing nutrition information and suggested dietary interventions Includes a bioscience approach that focuses on inflammation and revisits the lipid hypothesis Presents the view that nutritional interventions have considerable value not only for reducing cardiovascular risk for CVDs patients but also acting as the best precaution for otherwise healthy people Advocates that nutritional habits that are formed at a young age are the best way to tackle the global epidemic that is CVDs Oxidative Stress and Vascular Disease John F. Keaney Jr., 2012-12-06 One of the major biomedical triumphs of the post World War II era was the definitive demonstration that hypercholesterolemia is a key causative factor in atherosclerosis that hypercholesterolemia can be effectively treated and that treatment significantly reduces not only coronary disease mortality but also all cause mortality Treatment to lower plasma levels of cholesterol primarily low density lipoprotein LDL cholesterol is now accepted as best medical practice and both physicians and patients are being educated to take aggressive measures to lower LDL We can confidently look forward to important decreases in the

toll of coronary artery disease over the coming decades However there is still uncertainty as to the exact mechanisms by which elevated plasma cholesterol and LDL levels initiate and favor the progression of lesions There is general consensus that one of the earliest responses to hypercholesterolemia is the adhesion of monocytes to aortic endothelial cells followed by their penetration into the subendothelial space where they differentiate into macrophages These cells and also medial smooth muscle cells that have migrated into the subendothelial space then become loaded with multiple large droplets of cholesterol esters the hallmark of the earliest visible atherosclerotic lesion the so called fatty streak This lesion is the precursor of the more advanced lesions both in animal models and in humans Thus the centrality of hypercholesterolemia cannot be overstated Still the atherogenic process is complex and evolves over a long period of time

Phospholipids and Signal Transmission Raphael Massarelli, Lloyd A. Horrocks, Julian N. Kanfer, Konrad Löffelholz, 2013-06-29 Once Nietzsche said that human beings may be divided into two categories Apollonians and Dionysians By this the philosopher meant that there are human beings a who know what they are going to do in the long term future what we now call the grant application for the next 5 years i e Apollonians and b who barely know what they are going to do tomorrow morning before breakfast i e Dionysians To organize a symposium this symposium in particular a committee had to be formed either of individuals sharing both Nietzschean characteristics or of individuals possessing either characteristic Considering the rarity of the former type of subject this organizing committee was spontaneously formed by a typical sample of both types of individuals We first met in Perugia in 1988 Those of us who were Apollonians had thus a chance to organize a programme The Dionysians knew what was going to happen to them but of course did not know yet how to cope with it They duly did so every day of the meeting after breakfast The organizers decided that it would be a useful exercise to assemble experts having different perspectives but all pursuing a very rapidly developing aspect of cell biology They also hoped that these selected Apollonians and Dionysians would not merely recount their results but try to project the future through active interchanges of ideas and opinions with other attendees
