Pointing At The Direction Of Sound:

Anthropometric Individualization of Head-Related Transfer Functions Analysis and Modeling Ramona Bomhardt, 2017-09-04 Human sound localization helps to pay attention to spatially separated speakers using interaural level and time differences as well as angle dependent monaural spectral cues In a monophonic teleconference for instance it is much more difficult to distinguish between different speakers due to missing binaural cues Spatial positioning of the speakers by means of binaural reproduction methods using head related transfer functions HRTFs enhances speech comprehension These HRTFs are influenced by the torso head and ear geometry as they describe the propagation path of the sound from a source to the ear canal entrance Through this geometry dependency the HRTF is directional and subject dependent To enable a sufficient reproduction individual HRTFs should be used However it is tremendously difficult to measure these HRTFs For this reason this thesis proposes approaches to adapt the HRTFs applying individual anthropometric dimensions of a user Since localization at low frequencies is mainly influenced by the interaural time difference two models to adapt this difference are developed and compared with existing models Furthermore two approaches to adapt the spectral cues at higher frequencies are studied improved and compared Although the localization performance with individualized HRTFs is slightly worse than with individual HRTFs it is nevertheless still better than with non individual HRTFs taking into account the measurement effort

Principles of Forensic Audio Analysis Robert C. Maher, 2018-11-07 This book provides an expert introduction to audio forensics an essential specialty in modern forensic science equipping readers with the fundamental background necessary to understand and participate in this exciting and important field of study Modern audio forensic analysis combines skills in digital signal processing the physics of sound propagation acoustical phonetics audio engineering and many other fields Scientists and engineers who work in the field of audio forensics are called upon to address issues of authenticity quality enhancement and signal interpretation for audio evidence that is important to a criminal law enforcement investigation an accident investigation board or an official civil inquiry Expertise in audio forensics has never been more important In addition to routine recordings from emergency call centers and police radio dispatchers inexpensive portable audio video recording systems are now in widespread use Forensic evidence from the scene of a civil or criminal incident increasingly involves dashboard recorders in police cars vest pocket personal recorders worn by law enforcement officers smart phone recordings from bystanders and security surveillance systems in public areas and businesses Utilizing new research findings and both historical and contemporary casework examples this book blends audio forensic theory and practice in an informative and readable manner suitable for any scientifically literate reader Extensive examples supplementary material and authoritative references are also included for those who are interested in delving deeper into the field
