Polarization Dynamics In Nuclear And Particle Physics - Proceedings Of The 2nd Adriatico Research Conference Asim Orhan Barut, Nello Paver, Aldo Penzo, Ryszard Raczka, 1993-12-22 In the four years since the first Trieste Meeting on Spin and Polarization Dynamics in Nuclear and Particle Physics considerable progress has been made both in the theoretical and experimental aspects of this field The polarization phenomena have given rise to many more detailed and crucial tests which enhance our understanding of particle physics New information can also be uncovered in the process of conducting the various tests For this reason considerable efforts have been put into the present and future accelerators to extend the experimental data to measure polarization asymmetries for both polarized targets and polarized scattered and produced

particles The 2nd Adriatico Research Conference held in January 1992 brought together both theorists and experimentalists who presented many new findings These findings have been compiled into this compact volume to give a complete picture of the wide range of theoretical and experimental problems difficulties results prospects and hopes which are at the core of particle physics studies today It will be a useful guide for the present status of polarization phenomena and their fundamental implications
